# Anthropology (1068)

1.	Mutation as a theory A) Hugo de Vries	of evolution was propo B) Dobzhansky	osed by: C) Darwin	D) Mendel
2.	Neo-Darwinism is als A) Mendelian theory C) Synthetic theory o	so known as:	B) Catastrophism D) None of these	
3.	In India, Dryopithecu A) Nasik	as fossil primate was di B) SaraiNahar	scovered from: C) Bhimbetka	D) Siwalik Hills
4.	The strongest support A) Fossils C) Embryology	t to organic evolution c	omes from the study o B) Comparative anato D) Taxonomy	
5.	The theory of Lamaro A) Inheritance of acq C) Isolation		B) Natural selection D) Mutation	
6.	Who amongst the fol A) Charles Darwin C) Dr Robert Broom	lowing has written the	book <i>'The Descent of I</i> B) Louis Dollo D) Raymond Dart	Man' <sup>7</sup>
7.	The driving force of a A) Mutation	natural selection is B) Variation	C) Genetic drift	D) Natural selection
8.	During mitosis the ch A) Metaphase	aromosomes begin to se B) Anaphase	eparate instage. C) Prophase	D) Telophase
9.	A gamete cell contain A) Haploid	ning a single genome is B) Triploid	known as; C) Tetraploid	D) Polyploid
10.	A complete set of c its A) Genome C) Genetic code	hromosomes and nucl	ear genes carried by  B) Gene amplification D) Gene	an individual is called
11.	The ability of a gene A) Expressivity	to express itself phenor B) Penetrance	typically is called C) Reversion	D) Lethality
12.	The youngest phenon A) Lowest layer	nenon under the stratig B) Topmost layer		sented by D) None of these
13.	The Pleistocene is an A) Tertiary period C) Primary period	epoch which forms a p	part of the B) Quaternary period D) None of these	

	Villafranchian flora a A) Cow	nd fauna on land includ B) Elephant	de the ancestors of mo C) Horse	dern D) All of these
16.	<ul><li>A) Glaciation</li><li>Man started practicing</li></ul>	ninfall are called B) Pluviation g agriculture in the B) Chalcolithic	C) Interglaciation period.	<ul><li>D) Interpluviation</li><li>D) Mesolithic</li></ul>
	Megaliths are: A) Large stones C) A special monume	nt	B) Memorial stones of D) Artistic rock sculp	
	The earliest cultural p A) Mesolithic		C) Chalcolithic	D) Iron age
	Mesolithic Age succe A) Upper Palaeolithic C) Chalcolithic		B) Neolithic D) Iron Age	
	A genotype consisting A) Dominant	g of two identical gene B) Homozygous	_	is said to be: D) Heterozygous
	Diastema is present of A) Tooth	n the; B) Femur	C) Fibula	D) Dental arch
	S.S- Sarkarin 1961 di A) 7	vided the Indian popul B) 6	ation intoethnic eler	ments. D) 5
	The first well-preservagment Dart from: A) Taung, South Afric C) Tuscany, Italy		tralopithecine group v B) Kimber 197, South D)Siwalik, India	vas first discovered by n Africa
	The evolution of man A) Holocene	from ape-like creature B) Pleistocene	e to <i>Homo sapiens</i> was C) Pliocene	large accomplished in: D) Miocene
	In mammals red blood A) Not present C) Non-nucleated circ	•	B) Nucleated circular D) None of these	discs
	The term 'folk society A) Malinowski	' was first used by: B) Robert Redfield	C)Tylor	D) Milton Singer
	The term 'part society A) Kroeber	' for peasant society was B) George Foster	as first stated by: - C) Robert Redfield	D) None of these

<b>28.</b> Who among the follow A) Margaret Mead	owing is associated with B) Leslie A. White		D) E. B.Tylor		
29. Among the following, who has been associated with studies on culture and personality?					
A) Robert Redfield	B) Eric Wolf	C) R. Linton	D) A.L. Kroeber		
A) Ambilocal 31 is a matri A) Gonds of Madnya	ncle is known as B) Neolocal ilineal society found in a Pradesh	residence. C) Amitalocal India. B) Kadars of Malab	D) Avunculocal ar forest in South India		
C) Khasis of Meghal  32. Marriage of one man A) Pratiloma	a) a	several sisters is calle			
<b>33.</b> Marriage within the (A) Endogamy		C) Endogamy	D) Hypergamy		
<b>34.</b> Ego-centric groups a A) Kindred		C) Clans	D) Phratries		
<b>35.</b> Who gave the idea of A) E.B. Tylor	f classificatory and des B) L.H. Morgan				
<b>36.</b> Unilineal kin groups A) Their size C) Their amorphous	•	B) Their utility durin D) Their corporate cl	ng emergency situations haracter		
<b>37.</b> Which amongst the f A) Land C) Cattle	following is considered	as property in simple B) Tools and implem D) All of these			
<ul> <li>38. Who amongst the following held the view that division of labour in modern societies i the principal source of social cohesion or social solidarity?</li> <li>A) Auguste Comte</li> <li>B) Max Weber</li> <li>C) Emile Durkheim</li> <li>D) Herbert Spencer</li> </ul>					
<b>39.</b> In the absence of law of the following help A) Folkways	y, defined in terms of coin maintaining social of B) Customary Rules	order in simple societie			
<b>40.</b> A fundamental concorne's own will or des A) Authority	-	efined as the ability to	o make others act as per  D) None of these		

	reciprocity as the de		attern, r	no concept of	s and gatherers, with private ownership of re termed as:  D) Peasants	
42.	Who amongst the foll A) Robertson Smith	owing gave the theory B) E. B. Tylor		nism? Marrett	D) Emile Durkheim	
43.	-	om the Polynesian trib neory known as Anima B) Mana	_		milar meaning in them  D) Magic	
	A) reusinsin	D) Mana	C) 1 au	000	D) Magic	
44.	Haimendorf did his m A) Central India	najor work in:  B) South India	C) Nor	th India	D) North-East India	
	Which of the following levels of the social hie		ent of ir	ndividuals or g	roups between different	
		B) Social gathering	C) Soc	ial mixing	D) Social mobility	
	<ul> <li>6. Functionalism is:</li> <li>A) A study of cause-and-effect relationships</li> <li>B) A study of the inter-relatedness of the parts of a whole</li> <li>C) A holistic study conceptualising the whole only</li> <li>D) None of these</li> </ul>					
	47. Jajmani system indicates a set of A) Contractual relations B) Political relation C) Marital relations D) Economic relations					
48.	<ul><li>Which amongst the following is a corporate group?</li><li>A) A youth organisation</li><li>C) A neighbourhood group</li></ul>			B) Members of D) Joint famil	of a political party y	
49.	Who first differentiated between 'social structure' as A) Raymond Firth C) Claude Levi-Strauss			nd 'social organ B) A.R. Radel D) E. Evans-F	liffe-Brown	
50.	Which of the following	ng is not an essential cl	naracteri	istic of a social	group?	
_ 0.	A) Physical proximity C) Group norms	_		B) Common is	<u> </u>	

### **Bio-Chemistry**(1068)

1. Similarities in the structure and function of two proteins indicate that they are members of a family that share a common ancestor. If they are from different species, they are called-

A) Homologs

B) Paralogs

C) Orthologs

D) Proteologs

- 2. Which of the following statements about the active site of an enzyme is correct?
  - A) It binds the substrate of the reaction it catalyses more tightly than it does the transition state intermediate.
  - B) It binds the substrate of the reaction it catalyses less tightly than it does the transition state intermediate.
  - C) It binds the product of the reaction it catalyses more tightly than it does the transition state intermediate.
  - D) It is complementary to the substrate of the reaction it catalyses.
- **3.** Which of the following statements about isoeletric focusing is correct?
  - A) Proteins separated by isoelectric focusing cannot be tested for biological activity.
  - B) Proteins separated by isoelectric focusing can be tested for biological activity
  - C) The separation of proteins by isoelectric focusing is only based on charge.
  - D) The separation of proteins by isoelectric focusing is only based on size.
- **4.** Which of the following statements about membrane fluidity is correct?
  - A) Membrane fluidity is increased when there is a high proportion of *trans* unsaturated fatty acids in the glycerophosphate molecules that make up the bilayer.
  - B) Membrane fluidity is decreased when there is a high proportion of *cis* unsaturated fatty acids in the glycerophosphate molecules that make up the bilayer.
  - C) Membrane fluidity is increased when there is a high proportion of *cis* unsaturated fatty acids in the glycerophosphate molecules that make up the bilayer.
  - D) Membrane fluidity is increased when there is a high proportion of saturated fatty acids in the glycerophosphate molecules that make up the bilayer.
- **5.** Insulin and glucagon are two major hormones that regulate carbohydrate metabolism. Which of the following statements correctly explains their action?
  - A) During the post-absorptive phase, high insulin levels mediate glucose uptake in muscles.
  - B) During emergency situations muscle uses its glycogen stores to increase blood glucose levels.
  - C) During the post-absorptive phase, high glucagon levels mediate glucose uptake in muscles.
  - D) During the post-absorptive phase, high insulin levels mediate glucose uptake in the liver.

- **6.** Which of the following statements about the enzyme lactate dehydrogenase is correct?
  - A) Lactate dehydrogenase catalyses the oxidation of pyruvate to lactate to regenerate NAD<sup>+</sup>.
  - B) Lactate dehydrogenase ensures mitochondrial NADH is oxidised
  - C) Lactate dehydrogenase catalyses the reduction of pyruvate to lactate to regenerate NADH.
  - D) Lactate dehydrogenase catalyses the reduction of pyruvate to lactate to regenerate NAD<sup>+</sup>.
- 7. During fatty acid synthesis, acetyl groups are transported from the mitochondrion to the cytosol as-
  - A) Citrate

B) Malonyl CoA.

C) Acetyl CoA

- D) Acetylcarnitine
- **8.** Which of the following reasons does not apply for conversion of proto-oncogene to oncogene?

A) Mutation in coding sequence

B) Gene amplification

C) Mutation in non-coding sequence

- D) chromosome rearrangement
- **9.** Which of the following method is extensively used for obtaining pluripotent stem cells for somatic cell gene therapy?
  - A) Dispersal and culture of cells from morula
  - B) Collection of stem cells from adult tissues and their culture under specific conditions
  - C) Isolation and culture of inner cell mass of a blastocyst
  - D) Collection and culture of primordial germ cells from a fetus
- 10. In an  $\alpha$ -helical polypeptide, the backbone Hydrogen bonds are between-
  - A) NH of n and CO of n+4 amino acid
  - B) NH of n and CO of n+3 amino acid
  - C) CO of n and NH of n+3 amino acid
  - D) CO of n and NH of n+4 amino acid
- **11.** Proofreading activity of DNA polymerase III corrects errors during replication by recognizing incorrect bases at-
  - A) 3'end of growing chain and removing these by 3'-5' exonuclease activity
  - B) 5'end of growing chain and removing these by 3'-5' exonuclease activity
  - C) 3'end of growing chain and removing these by 5'-3' exonuclease activity
  - D) 5'end of growing chain and removing these by 5'-3' exonuclease activity

	caused by a mutation in cystic fibrosis TR). CFTR is involved in the transport of  B) Bicarbonate D) Phosphate			
<ul><li>13. The regulation of transcription allows environment. Which of the subunits of RNA A) Alpha</li><li>C) Beta</li></ul>				
<ul><li>14. Collagen, an important extracellular in hydroxylation for strengthening its triple her for this essential hydroxylation reaction?</li><li>A) Vitamin C</li><li>B) Thiamine</li></ul>	matrix protein, requires post translational elix structure. Which of the vitamin is required  C) Vitamin E  D) Biotin			
<ul> <li>15. What is the smallest number of molecules of a 50 residue peptide chain, starting from p of PPi is equivalent to the hydrolysis of AT A) 50 ATPs, 100GTPs</li> <li>C) 100 ATPs, 100 GTPs</li> </ul>	recursor amino acids. Assume that hydrolysis			
<ul> <li>16. Which one of the following methods is most suitable for monitoring the alterations in the levels of a serum protein using an antibody?</li> <li>A) Fluorescence activated cell sorting</li> <li>B) Immunofluorescence microscopy</li> <li>C) Western blotting</li> <li>D) Enzyme linked Immunosorbent Assay</li> </ul>				
<ul><li>17. Lectins are used to identify the blood ty recognize and bind?</li><li>A) Carbohydrates</li><li>C) Lipids</li></ul>	pe in a clinical setting. Which motif does it  B) Proteins D) Nucleic acids			
<ul> <li>18. Which one of the following combinations must be present in a steroid receptor that is located in the cytoplasm?</li> <li>A) Nuclear export sequence, leucine zipper</li> <li>B) Nuclear localisation sequence, leucine zipper</li> <li>C) Nuclear export sequence, Zinc finger motif</li> <li>D) Nuclear localization sequence, Zinc finger motif</li> </ul>				
<ul> <li>19. What is the function of p53 which prevents the development of cancer?</li> <li>A) It is a transcription factor.</li> <li>B) It prevents the replication of cells with damaged DNA.</li> <li>C) It helps in maintenance of telomere length.</li> <li>D) It prevents cells from triggering apoptosis.</li> </ul>				

<b>20.</b> Which of the following signals is not coupled to G protein related signal transduction pathway?						
A) Insulin	B) Glucagon					
C) Epinephrine	D) Oxytocin					
21. A PCR reaction that continues for 30 cycles will produce approximately how many PCF products from a single template DNA molecule?  A) 64  B) 1,28,000						
C) Approximately 1 million						
<ul> <li>22. In an experiment to identify the post-translational modification of a protein, following experimental data was obtained.</li> <li>1. Protein move more slowly in an SDS PAGE.</li> <li>2. Isoelectric focusing showed no change in pI.</li> <li>3. Mass spectrometry analysis showed that the modification occurred on Sering</li> </ul>						
residue. The modification that pro A) Phosphorylation	B) Glycosylation					
C) Ubiquitination	D) ADP- ribosylation					
23. Which of the following class of antibod reaction?  A) IgE  B) IgA	dies is involved in Type I hypersensitivity  C) IgG  D) IgM					
<ul> <li>24. A deletion of three consecutive bases in the coding region of a gene cannot result in-A) Deletion of a single amino acid without any change in the protein</li> <li>B) Replacement of a single amino acid without any change in protein function</li> <li>C) Replacement of a single amino acid by another without any other alteration in the sequence of a protein</li> <li>D) Production of a truncated protein</li> </ul>						
25. Which of the following enzymes does not r A) DNA dependent RNA polymerase C) DNA dependent DNA polymerase	± ±					
<ul><li>26. Zn is an essential cofactor for :</li><li>A) Transaminases</li><li>C) Pyruvate dehydrogenase</li></ul>	B) Superoxide dismutase D) Glutamate dehydrogenase					
<ul><li>27. Citrate has a positive allostearic effect on w</li><li>A) Pyruvate kinase</li><li>C) Phosphofructokinase</li></ul>	which one of the following-B) Acetyl CoA carboxylaseD) Fatty acid synthase					
<b>28.</b> The human genome project began as resear abnormalities-	archers mapped and sites of cytogenetic					
A) RFLPs C) PCRs	B) VNTRs D) Lods					

- 29. The catalytic efficiency of two enzymes can be compared by-
  - A) Molecular size of the enzymes
- B) Their optimum pH
- C) Formation of product
- D) Km value
- **30.** Which of the following statements about the competitive inhibition of an enzyme-catalyzed reaction is correct?
  - A) A competitive inhibitor and substrate can bind simultaneously to the enzyme.
  - B) The  $V_{max}$  and  $K_m$  (Michaelis constant) for a reaction are unchanged in the presence of a competitive inhibitor.
  - C) The  $V_{max}$  for a reaction remains unchanged in the presence of a competitive inhibitor.
  - D) The  $K_{\text{m}}$  for a reaction remains unchanged in the presence of a competitive inhibitor
- **31.** Which of the following statements about Western Blotting is correct?
  - A) The detection of a particular protein by Western Blotting relies on the very specific interaction between the protein and its antibody.
  - B) The detection of a particular protein by Western Blotting relies on labelling the protein with a specific dye.
  - C) The detection of a particular protein by Western Blotting relies on labelling the antibody with a specific dye.
  - D) The detection of a particular protein by Western Blotting relies on the denaturation of the protein.
- 32. Which of the following statements about the mechanism of the Na<sup>+</sup>/K<sup>+</sup> pump is correct?
  - A) The Na<sup>+</sup>/K<sup>+</sup> ATPase uses energy to pump Na<sup>+</sup> outside the cell and K<sup>+</sup> inside.
  - B) The Na<sup>+</sup>/K<sup>+</sup> ATPase uses energy to pump Na<sup>+</sup> inside the cell and K<sup>+</sup> outside.
  - C) The Na<sup>+</sup>/K<sup>+</sup> ATPase uses energy to bind both Na<sup>+</sup> and K<sup>+</sup> in turn.
  - D) The phosphorylation of the Na<sup>+</sup>/K<sup>+</sup> ATPase does not change its conformation.
- **33.** Which of the following statements about food storage in the body is correct?
  - A) More glycogen is stored per unit mass in the muscles than in the liver.
  - B) Glycogen storage in the liver is unlimited.
  - C) Fat is a more efficient form of fuel storage than glycogen.
  - D) Proteins in muscle cells are a normal storage form of fuel.
- **34.** Which of the following statements about prostaglandins is NOT correct?
  - A) Prostaglandins are eicosanoids made from unsaturated fatty acids.
  - B) Prostaglandins are eicosanoids made from saturated fatty acids.
  - C) Prostaglandins synthesized from arachidonic acid have a pain-relieving effect.
  - D) Prostaglandins synthesized from arachidonic acid have a fever-reducing effect.
- **35.** A protein has one Tryptophan and two Tyrosine residues. What would be the molar concentration of the protein if its absorbance at 280nm is 1.6 { Extinction coefficient of Trp residue is 5000M<sup>-1</sup>cm<sup>-1</sup> and for Tyr- 1500 M<sup>-1</sup>cm<sup>-1</sup>}.

	A) 0.2mM	B) 2mM	C) 1.6mM	D) 3.2mM
36.	Koshland's theory A) Lock and k	•	n is called- B) Enzyme coenzy	yme theory

D) Induced fit theory

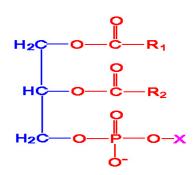

- **37.** Following are the steps in DNA fingerprinting
  - i) Hybridisation with probe
  - ii) Isolation of DNA

C) Zymogen theory

- iii) Digestion of DNA with restriction endonucleases
- iv) Detection by autoradiography
- v) Separation of DNA fragments by electrophoresis
- vi) Transferring the fragments to synthetic membrane

Which is the correct order of the steps-

**38.** Following is the general structure of a glycerophospholipid. What is the common name of the phospholipid if X is replaced by choline-

- A) Cardiolipin
  B) Cephalins
  C) Lecithin
  D) Plasmalogen
- **39.** Phenylketonuria occurs due to deficiency of the enzyme:
  - A) Tyrosine hydroxylase

B) Phenylalanine hydroxylase

C) Tyrosinase

D) Homogentisate oxidase

**40.** Which of the following would have high content of triglycerides?

A) LDL

B) Chylomicrons

C) HDL

D) VLDL

**41.** You have to determine the amino acid sequence of a peptide. You perform the following steps using enzyme cleavage of your peptide (see table below):

<u>Step 1:</u> Treatment with trypsin yields three fragments with the following sequences (in the order of their length): Trp-Gly-Ala , Ala-Gly-Thr-Lys, Tyr-Leu-Asp-Arg.

<u>Step 2:</u> Treatment with chymotrypsin gave the following three peptide fragments: Gly-Ala, Leu-Asp-Arg-Trp, Ala-Gly-Thr-Lys-Tyr. What is the sequence of your peptide?

A) Ala-Gly-Thr-Lys-Tyr- Leu-Asp-Arg-Trp- Gly-Ala

B) Gly-Ala- Leu-Asp-Arg-Trp- Ala-Gly-Thr-Lys-Tyr C) Trp-Gly-Ala- Ala-Gly-Thr-Lys-Tyr-Leu-Asp-Arg D) Tyr-Leu-Asp-Arg- Ala-Gly-Thr-Lys- Trp-Gly-Ala **42.** Tumor cells have a higher requirement for glutamine. Which out of the following is NOT an appropriate reason for this metabolic pattern? A) Serve as a precursor for urea synthesis B) Serve as a source of energy production via conversion to Glutamate C) Act as a source of N in purine and pyrimidine synthesis D) Serve as a biosynthetic precursor for amino acids 43. The first reaction in the degradation of the majority of amino acids involves the participation of which of the following enzymes-A) NAD+ B) Pyridoxal phosphate C) Thiamine pyrophosphate D) FAD **44.** A 25 year old man undertakes a prolonged fast for religious reasons. Which of the following metabolites will be elevated in his blood plasma after 24 hrs? A) Glucose B) Glycogen C) Ketone bodies D) Non esterified fatty acids **45.** Allopurinol, a drug for the treatment of Gout, is a----- inhibitor of xanthine oxidase. A) Non-competitive B) Uncompetitive C) Competitive D) Allostearic **46.** Which of the following features of mature mRNA is thought to protect it against degradation? A) 3' Poly C tail B) Lariat structure C) Special Post translational modifications D) 5'-methyl Guanosine Cap **47.** Select the one FALSE statement. A) Chaperones often exhibit ATPase activity. B) Protein disulfide isomerase and peptidyl prolyl isomerase are involved in proper folding of proteins. C) Ubiquitin is a small protein involved in protein degradation by lysosomes. D) Mitochondria contain chaperones. **48.** Phase II reaction of xenobiotic metabolism include all of the following except-

B) Glucuronidation

D) Methylation

- **49.** Which of the following statements do not apply to Puromycin?
  - A) It is a structural analog of tyrosinyl tRNA.

A) HydroxylationC) Sulfation

- B) It is incorporated via the A site on ribosome.
- C) It inhibits both eukaryotic and prokaryotic translation.
- D) It inhibits only prokaryotic translation.
- **50.** Which of the following groups of enzymes are unique to the Calvin cycle?
  - A) Ribulose bisphosphate carboxylase, phosphoribulokinase, and sedoheptulose 1,7-bisphosphatase
  - B) Ribose 5-phosphate isomerase, epimerase, and aldolas
  - C) Pyruvate kinase, Pyruvate carboxylase, Phosphofructokinase
  - D) glyceraldehyde-3- phosphate dehydrogenase, Pyruvate kinase, Phosphoenolcarboxykinase

# BioPhysics(1068)

1.	Transition temperature of membrane bilayer is dependent on A) Presence of internal proteins				
	· · · · · · · · · · · · · · · · · · ·	ransmembrane prote	eins		
		-	nains of the phospholi	pids are unsaturated	
	D) Protein to lip			•	
2.	How many signals d A) Five <sup>1</sup> H signa	oes the aldehyde (Cals and six <sup>13</sup> C signa	CH <sub>3</sub> ) <sub>3</sub> CCH <sub>2</sub> CHO have lls.	in <sup>1</sup> H NMR and <sup>13</sup> C NMR'	
		nals and four <sup>13</sup> C sig			
	C) Five <sup>1</sup> H signa	als and four <sup>13</sup> C sign	ials.		
	D) Three <sup>1</sup> H sign	nals and six <sup>13</sup> C sign	nals.		
3.	ELISA stands for				
	· · · · · · · · · · · · · · · · · · ·	ked Immuno Sorben	it Assay		
	B) Enzyme Imm	<u>-</u>			
		ged Immuno Sorber	-		
	D) Enzyme-Linl	ked Immuno Solutio	on Assay		
4.	Fluorescence recove		hing in live cells is us	ed to determine	
	A) Co-localizati				
	,	ween two organelles	3		
	C) Diffusion of				
	D) Nucleic acid	compactness			
5.	Circular Dichromisn	n spectroscopy is pri	imarily used for		
	A) Primary struc	cture determination	in proteins		
	B) Primary struc	cture determination	in DNA		
	•	ructure determination	-		
	D) Primary struc	cture determination	in lipids		
6.	The absorption coeff	icient of 511 keV ga	amma rays depends o	n the :	
	A) Nature of the	<b></b>	B) Density of the	•	
	C) Path travelled	in the medium	D) Intensity of the	ne gamma rays	
7.	In the helium-neon la		_		
	· · · · · · · · · · · · · · · · · · ·	nsition occurs in hel			
	B) The purpose neon atoms	of the helium atom	is to help achieve a po	opulation inversion in the	
		ulated emission as v	well as spontaneous e	mission in the Neon atoms	
			th the Helium and Neo		
8.	A nanosecond is:				
	A) $10^{-6}$ sec	B) $10^{-3}$ sec	C) $10^{-12}$ sec	D) $10^{-9}$ sec	
9.	Device that converts	one form of signal	into another form is c	alled:	

A) Transform	ner B)	Transducer	C) Amplifier	D) Condenser			
<b>10.</b> Intrinsic rhythm A) SA node		is maintained by AV node	C) Internodal fibres	D) Purkinje fibres			
	<ul> <li>11. The bond between first phosphate group attached to sugar molecule in a nucleotide is</li> <li>A) Phosphoester</li> <li>B) Phosphodiester</li> <li>C) Glycosidic</li> <li>D) Phosphoanhydride</li> </ul>						
<ul> <li>12. In a 3<sub>10</sub> helical polypeptide, the backbone hydrogen bonds are between</li> <li>A) NH of n and CO of n+4 amino acid</li> <li>B) CO of n and NH of n+3 amino acid</li> <li>C) CO of n and NH of n+4 amino acid</li> <li>D) NH of n and CO of n+3 amino acid</li> </ul>							
<b>13.</b> In electron micro A) Positive	-	as compare to filam Negative	ent, the potential on sh C) Zero	nield is always  D) Random			
14. HEPES buffer is A) Animal ti C) Bacterial	ssue cult	ture medium	B) Plant tissue culture D) Yeast nutrient med				
<b>15.</b> Frequency range A) 8-13 Hz	_	a rhythm in normal 18-30 Hz	EEG C) 1-3.5 Hz	D) 4-7 Hz			
16. The sedimentation velocity of a protein in a centrifuge does not depend on the :  A) Density of solution B) Density of protein C) Charge on protein D) Shape of protein							
<b>17.</b> Which of the fol A) Glutamate	_	mino acids is not the Cysteine	ne part of glutathione? C) Glutamine	D) Glycine			
<b>18.</b> For macromolec A) 35%		nodel refined to an l	R factor less than C) 15%	. indicates a good fit D) 20%			
<ul> <li>19. Which of the following facts will distinguish whether a cell is prokaryotic or eukaryotic?</li> <li>A) The presence or absence of a rigid cell wall</li> <li>B) The presence or absence of internal membranes partitioning the cells</li> <li>C) The presence or absence of Ribosomes</li> <li>D) The presence or absence of DNA as the Genetic material</li> </ul>							
<b>20.</b> The first protein A) Insulin		quenced is : Myosin	C) Myoglobin	D) Haemoglobin			
<b>21.</b> Lipids are syntho A) Smooth en			B) Rough endoplasm	ic reticulum			

C) Golgi complex		D) None of these	
22. Antibodies are produ A) T-cells C) Plasma cells	ced by:	B) NK-cells D) B-cells	
23. Genetically programm A) Apoptosis C) Phagocytosis	med cell death is called	B) Necrosis D) All of these	
<b>24.</b> Which one of the followard A) Blood	lowing is not a type of B) Lymph	connective tissue? C) Adipose tissue	D) Muscle
25. The site of oxidation A) Mitochondric C) Golgi apparat	on	B) Endoplasmic retic D) Ribosomes	eulum
<b>26.</b> Component of atom in A) Nucleus	nvolved in study of str B) Electron	ructure with X-ray crys  C) Proton	stallography is: D) Neutrons
<b>27.</b> The structure of colla A) Triple helix	ngen is : B) Double helix	C) Single helix	D) Beta stranded
28. Mass spectroscopy is measuring their:  A) Mass only C) Mass to charge		B) Charge only D) Charge to mass ra	
<b>29.</b> At pH 10 which of th A) Glycine	ne amino acid would fu B) Arginine	nction as a buffer: C) Glutamine	D) Lysine
C) The pH at wh		imeric protein rion	
<b>31.</b> The bending of a bea known as	m of light when it pass	ses obliquely from one	medium to another is
A) Reflection	B) Refraction	C) Dispersion	D) Polarization
32. The first bioinformat A) Pearson C) Michael J. Dur		ed by B) Richard Durbin D) Dayhoff	

**33.** Extraction of 99mTc-MAG3 is by:

	<ul><li>A) Active transport</li><li>C) Tubular secretion</li></ul>		<ul><li>B) Glomerular filtration</li><li>D) Facilitated diffusion</li></ul>		
<b>34.</b> S	SI unit of radioactivi A) Sieverts	ty is: B) Ci	C) Rutherford	D) Bq	
	A) Sieverts	b) Ci	C) Kullerioid	<i>D)</i> <b>Б</b> q	
	Which one of the follogamma rays?	lowing detectors cannot	ot be used for the energ	y determination of	
	A) Ionization char C) Geiger-Muller		B) Proportional counter D) NaI(Tl) detector		
<b>36.</b> 1	Mucous, sweat, oil, a A) Exocrine gland C) Paracrine gland		all B) Endocrine glands D) Psedocrine glands		
<b>37.</b> V	What is the rotationa A) 360°	l symmetry of a square B) 180°	e (C) 90°	D) 45°	
<b>38.</b> 1	Name the snail shape A) Vestibule	ed organ in the inner ea B) Stapes	ar which is responsible C) Incus	for hearing D) Cochlea	
<b>39.</b> V	Which one of the following A) Cyclotron	lowing is a microwave B) Magnetron	generator C) DC Generator	D) Alextron	
40. (	ClustalW is a method A) Pairwise sequ C) Multiple Sequ		B) Homology Modeli D) Introduction of gap	-	
<b>41.</b> I	(in the 10-20 lead sys A) 19	tem in an EEG the nur B) 20	nber of electrodes appli C) 21	ed are: D) 22	
<b>42.</b> 5			te the plane of polarized C) 270°		
<b>43.</b> V	What is the resting m A) -55 mV	nembrane potential of a B) -65mV	n neuron? C) -80 mV	D) -70mV	
<b>44.</b> ]	The number of crania A) 16	al nerves in human boo B) 12	ly are C) 8	D) 20	
<b>45.</b> 1	Nissl body originates A) Rough Endor C) Plasma Mem	olasmic Reticulum	B) Cytoplasm D) Vacuole		
<b>46.</b> I	MHC stands for A) Major Histoco	ompatibility complex	B) Minor Histocompa	atibility complex	

C) Major Hypersensitivity complex	D) Minor Hypersensitivity complex
<b>47.</b> Absorption of light in the ultraviolet region	is because of the:
A) Electronic transitions only	B) Vibrational level transitions only
C) Rotational level transitions only	D) Rotational and the vibrational transitions
<b>48.</b> The normal glomerular filtration rate is clos	e to:
A) 25 ml/min B) 50 ml/min	C) 100 ml/min D) 125 ml/min
<b>49.</b> The power supply is used to perform gel ele	ectrophoresis because it:
A) Converts AC to DC	B) Converts DC to AC
C) Converts AC to high power AC	D) Does not affect current
<b>50.</b> S phase of cell cycle deals with:	
A) Cell division	B) Cell arrest
C) Duplication of DNA	D) DNA repair

*x-x-x* 

	BioTechnolog	gy(1068)			
1.	In intrinsic pathway of apoptosis				
	A) Bcl2 inhibits apoptosis while Ba	x simulates apoptosis			
	B) Bcl2 stimulates apoptosis while	Bax inhibits apoptosis			
	C) Both Bcl2 and Bax inhibits apop	otosis			
	D) Both Bcl2 and Bax stimulates ap	ooptosis			
2.	The antagonistic action to adenylate c	yclase is shown by			
	A) cAMP	B) ATP			
	C) Protein kinase	D) Phosphodiesterase	;		
3.	While creating a knockout mouse us thymidine kinase gene is included in between the targeted chromosome and	the vector outside of t		•	
	A) Negative selection of cells homologous recombination	where target sequen	ce got	integrated	by
	B) Negative selection of cells where C) Positive selection of cells whomologous recombination		_	•	by
	D) Positive selection of cells where	target sequence got int	egrated	randomly	
4.	In PCR reaction one should not go	for more than about 3	30 amp	lification cy	cles
	because				
	A) Taq polymerase has a half-life of	f 30 min at 95°C			
	B) dNTPs got denatured				
	C) dNTPs get exhausted				
	D) Primers get exhausted				
5.	Real time PCR is a method used for				
	A) Qualitative amplification of DNA	A			
	B) Qualitative amplification of RNA	A			
	C) Quantitative analysis of mRNA	expression			
	D) Qualitative analysis of mRNA ex	xpression			
6.	Canning of vegetables and fruits is a				
	A) Heat process	B) Cold process			
	C) Irradiation process	D) Microwave proces	SS		
7.	The mother and father of Rajesh (may vision. Both maternal and paternal grais the probability of getting colour blin	and fathers of Rajesh v			
	A) 100%	B) 50%			

C) 25%	D) 0%				
8. Down syndrome is a diseases caused due to					
A) Nondisjunction of chromosome					
C) Crossing over	D) Sex linked inheritance				
9. The best wavelength associated with U	JV spectroscopy is				
A) 1nm -400μm	B) 190nm-1nm				
C) 380nm-190nm	D) 750nm-380nm				
10. Proteins are separated by SDS page or	the basis of				
A) Change	B) pI				
C) Shape	D) Size				
11. Fluorosecnt spectroscopy utilizes the	presence of intrinsic fluorescence by				
A) Tyrosine	B) Phenylalanine				
C) Tryptophan	D) Alanine				
<ul> <li>12. MTT assay is a colorimetric assay for assessing cell metabolic activity. It is based on the ability of cellular oxidoreductase enzymes <ul> <li>A) To oxidize the tetrazolium dye formazan to its insoluble form MTT</li> <li>B) To reduce the tetrazolium dye formazan to its insoluble form MTT</li> <li>C) To oxidize the tetrazolium dye MTT to its insoluble formazan</li> <li>D) To reduce the tetrazolium dye MTT to its insoluble formazan</li> </ul> </li> <li>13. iTRAQ is</li> </ul>					
A) An isobaric labeling method use	d in quantitative proteomics				
B) An isobaric labeling method use	d in quanlitative proteomics				
C) Method for quantitative analysis	of gene expression				
D) Method for qualitative analysis of	of gene expression				
<b>14.</b> Genomic imprinting is					
•	due to DNA methylation, resulted in altered				
phenotypes					
B) Only one of a pair of genes is silenced	s expressed, the other being methylated and				
C) DNA methylation patterns in a g	enome are passed on to the next generation				
	wing for genes to be expressed that should be				
silenced					
<b>15.</b> Which one is not a gene expression da	atabase				
A) Bodymap	B) GeneBank				

C) SeedGenes	D) Flyview				
<b>16.</b> A unique small segment/cDNA of an	active gene is known a	as			
A) ESTs	B) SNPs				
C) Contigs	D) hnRNA				
, 2	,				
<b>17.</b> Structural genomics is					
A) DNA sequencing followed by §	gene annotation				
B) DNA sequencing followed by §	genome annotation				
C) DNA sequencing followed by p	protein annotation				
D) RNA sequencing followed by g	gene annotation				
<ul><li>18. The question that can be answered us</li><li>A) What genes are required for bas</li><li>B) What genes are expressed by th</li><li>C) What genes are expressed in ste</li><li>D) What genes are expressed in both</li></ul>	sic cellular functions? ne tissue? em but not in root?	zation?			
<b>19.</b> A protein is coded by 366 nucleotide the length of peptide?	es including start and st	op codons. What will be			
A) 120 B) 121	C) 122	D) 366			
<ul> <li>20. What is the complementary sequence of 5' ATGCCGTCGAAGC 3'?</li> <li>A) 5' ATGCCGTCGAAGC 3'</li> <li>B) 3' ATGCCGTCGAAGC 5'</li> <li>C) 5' TACGGCAGCTTCG 3'</li> <li>D) 3' TACGGCAGCTTCG 5'</li> <li>21. pUC plasmid has N-terminus 146 aminoacids of β-galactosidase What is the rationale behind this?</li> </ul>					
A) For replication of plasmid					
B) For screening of <i>E. coli</i> having	nlasmid				
C) For screening of <i>E. coli</i> having	•				
D) For proper ligation of gene	prasmid with msert				
<b>22.</b> A continuous bioreactor in which o cell or products productivity is called A) Chemostat	•	ed to control the rate of			
C) pH stat	D) Temperature				
C) pii stat	D) Temperature				
<b>23.</b> In yeast two hybrid system a reporter A) Always GFP	gene is				
B) Fused with activation domain of	of transcription factor				
C) Expressed only when interaction	•	urs			

D) Expressed only when tes	sted protein are not interacting
<b>24.</b> phred score is	
•	lity of the identification of the nucleobases generated
by automated DNA sequ	iencing
B) Is a measure of the qual	ity of PCR product in real time PCR
C) Is a measure of the quan	tity of PCR product in real time PCR
D) Is a measure of the quar	ntity of the identification of the nucleobases generated
by automated DNA sequ	iencing
25. Which one is not a remedy for	property rights infringement?
A) Profit accounting	B) Specific performance
C) Damages	D) Injunction
<b>26.</b> Registration of certification m	ark can be done in
A) DBT	B) Trademark Registry
C) Certification Board	D) MHRD
<b>27.</b> A graft between members of co	lifferent species is known as
A) Allograft	B) Xenograft
C) Autograft	D) Isograft
<b>28.</b> In monoclonal antibody produ	action by hybridoma technology
A) B cell and myeloma cell	s is fused
B) B cell lacking HGPRT a	•
C) B cell and myeloma cell	
D) B cen and myeloma cen	s lacking HGPRT and producing antibody is fused
<b>29.</b> QTL	
A) Determines quality of a l	loci
B) Determines quantity of a	ı loci
C) Is a section of DNA (the	locus) which correlates with variation in a phenotype
D) Is a section of DNA (the	locus) which correlates with variation in a genotype
<b>30.</b> Bromodomain recognizes	
A) Methylated lysine residu	ies
B) Acetylated lysine residue	es

C) Phosphorylated lysine residuesD) Ubiqutinated lysine residues

A) Messenger RNA

C) Ribosomal RNA

**31.** In Crysper-cas9 system, crisper sequence is recognized by

B) Transfer RNA

D) Guide RNA

- **32.** A competitive inhibitor :
  - A) Increases both Km and Vmax
  - B) Decreases both Km and Vmax
  - C) Decreases Vmax
  - D) Increases Km without affecting Vmax
- **33.** RNA interference (RNAi) or Post-Transcriptional Gene Silencing (PTGS) is a conserved biological response to
  - A) double-stranded RNA
  - B) DNA-RNA hybrid
  - C) Methylated double stranded DNA
  - D) Single stranded DNA
- **34.** Reversed phase HPLC utilizes
  - A) A hydrophobic stationary phase and a polar mobile phase
  - B) A hydrophobic stationary phase and a non-polar mobile phase
  - C) A hydrophilic stationary phase and a non-polar mobile phase
  - D) A hydrophilic stationary phase and a polar mobile phase
- **35.** The model organism widely used for genetic studies
  - A) Neurospora
  - B) Drosophila melanogaster
  - C) Danio rerio
  - D) Bacillus subtilis
- **36.** A protein domain is
  - A) The  $\alpha$ -helical portion of a protein
  - B) the  $\beta$ -pleated sheet portion of a protein
  - C) An independent region of polypeptide chain having self-contained three-dimensional structure
  - D) A globular proteins
- **37.** BOD is a measure of :
  - A) Extent to which water is polluted with organic compounds
  - B) Carbon monoxide inseparably combined with haemoglobin
  - C) Wastes poured into water bodies
  - D) Amount of oxygen needed by green plants during day
- **38.** Artificial seeds are
  - A) Seeds produced in lab conditions
  - B) Seeds encapsulated in a gel
  - C) Somatic embryos encapsulated in a gel
  - D) Zygotic embryos encapsulated in a gel

<ul> <li>39. An esterase has been purified from inclusion bodies in the presence of urea. The protein has been refolded by serial dilution method. Which technique can be used to determine if protein has been refolded properly?</li> <li>A) NMR</li> <li>B) Spectrophotometric analysis</li> <li>C) SDS-PAGE</li> <li>D) CD spectroscopy</li> </ul>							
•	of the E. coli lac operon will be synthesized						
in presence of  A) High glucose, high lactose	B) No glucose, high lactose						
C) Low glucose, low lactose	D) High glucose, low lactose						
<ul> <li>41. The heat inactivation of serum in animal cell culture is carried out? <ul> <li>A) To inactivate complement system</li> <li>B) To activate growth hormones</li> <li>C) To inactivate any bacteria present</li> <li>D) To remove unwanted proteins</li> </ul> </li> <li>42. The hnRNA of a gene is 8800 ribonucleotide long. The mature mRNA is 2172 ribonucleotide long. This size difference is due to the</li> </ul>							
A) Splicing	B) Deletion						
C) Cleavage of RNA	D) Removal of tail						
<ul> <li>43. A gene for protein X was cloned in pET28a vector followed by transformation in DH5α E. coli strain. Upon induction with IPTG, expression of gene was not observed. The problem in expression is due to the</li> <li>A) Codon biasing</li> <li>B) Very Strong promoter</li> <li>C) Degradation of expressed protein</li> <li>D) Host selection</li> </ul>							
<b>44.</b> The resonance in protein structure is r	esponsible for						
<ul><li>A) The partial double bond characte</li><li>B) The prevention of rotation about</li><li>C) The planar nature of the peptide</li></ul>	<ul><li>A) The partial double bond character of the side chain-alpha carbon bond</li><li>B) The prevention of rotation about the alpha carbon</li><li>C) The planar nature of the peptide bond</li></ul>						
•	·						
	im, the genoypte frequency of heterozygotes,						
	ne gene being studied are 0.6 and 0.4, will be:						
A) 0.80 C) 0.48	B) 0.64 D) 0.32						
C) 0.70	D) 0.32						
<ul><li>46. GRAIL algorithm is used for searching genes in DNA sequence</li><li>A) Neural network</li><li>B) Wide network</li></ul>							

<ul> <li>47. Very long DNA can be separated by</li> <li>A) Acrylamide gel electrophoresis</li> <li>B) Agarose gel electrophoresis</li> <li>C) Paper chromatography</li> <li>D) Pulse field gel electrophoresis</li> </ul>	
<ul><li>48. One of the first reports of transger hormone gene fused to the promoter for A) T7</li><li>C) Mettalothionine</li></ul>	nic animals involved in transfer of growth or the B) T5 D) GST
<b>49.</b> The term "prey" is associated with	
A) AD hybrid	B) DBD hybrid
C) Yeast hybrid	D) Reverse two hybrid
<b>50.</b> Which type of biosafety facility is requ	uired to work with HIV?
A) BSL0	B) BSL1
C) BSL2	D) BSL3
<i>x-x-x</i>	

D) Hidden markov model

C) Rule based system

## **Botany (1068)**

1.	<ul><li>Which of the following is not an extinct mem</li><li>A) Lepidodendron</li><li>B) Sp</li><li>C) Phylloglossum</li></ul>	ber of pteridophyt henophyllum D) Calamites	es?
2.	<ul><li>Which of the following terms is used for the h</li><li>A) Biomass</li><li>C) Ecological yield</li><li>D) St</li></ul>	narvestable growth B) Primary prod anding crop	
3.	<ul> <li>Which of the following is commonly known a</li> <li>A) Tmesipteris elongate</li> <li>C) Psilotum nudum</li> <li>D) Hy</li> </ul>	s "Skeleton fern"? B) Pteris pedati ymenophyllum den	um
4.	<ol> <li>Spores of the fern plants germinate to form</li> <li>A) Embryo B) Prothallus C) Pr</li> </ol>	 otonema	D) Zygospore
5.	<ul><li>Category III of IUCN Protected Area pertains to A) Natural Monument</li><li>C) Wilderness Area</li><li>D) St</li></ul>	to the B) National Par rict Nature Reserv	
6.	<ul> <li>Which of the following best describes the cor</li> <li>A) A population in an urban area</li> <li>B) A population of different species livin</li> <li>C) A population that has become spatial</li> <li>D) A network of distinct and non-interact</li> </ul>	າg in the same geoຍຸ lly subdivided	
7.	<ul> <li>Which of the following terms is used for variations induced upon environmental gradi</li> <li>A) EcotypeB) Ecophene</li> <li>C) Ecophene</li> </ul>		showing reversible phenotypic  D) Ecotone
8.	<ul><li>Leaves are involved in the vegetative reprodute</li><li>A) Solanum nigrum</li><li>C) Bryophyllum daigremontianum</li><li>D) O<sub>i</sub></li></ul>	B) Brassica can	<del>-</del> ·
9.	<ol><li>The only natural habitat of the endangered N</li></ol>	1anipur Brow-Antle	ered deer is

	A) Keibul Lamjao C) Great Himalaya		-			
10.	Golden rice is a genetic A) Sunflower	-	riety of r C) Daff		ns a gene D) Mai	
	Recombinant DNA was A) 1974 Caryopsis is the fruit in A) Asteraceae	B) 1973	C) 1972	D) 19	71	D) Apiaceae
13.	Which of the following A) Avocado	is an example of B) Buttercup	f drupe?	C) Olive	D) Pea	r
14.	Which of the following A) Forests and Susta C) Forests and Wate	ainable Cities		ternational Da B) Forests and ests   Climate	d Energy	sts 2018?
15.	Chemically, ephedrine A) Saponin			C) Alkaloid		D) Diterpene
16.	Rattans are the type of A) Climbing Pines C) Climbing Ferns	·		B) Climbing Pool		
17.	Which of the following A) Plants tend to had B) Plants tend to had C) Plants tend to had D) Plants tend to had	ve red flowers ar ve red flowers ar ve blue flowers a	nd are rand are al	rely scented ways scented llways scented		

**18.** The change in allele frequency from one generation to the next is known as.....

19.	A) C.H. Morgan C) William Bateson	B) Hugo de Vries D) Wilhelm Johannse	en
20.	. Which of the following terms is used for A) Frustule C) Extra cellular matrix	r the hard and porous cell wall o B) Lorica D) Coccolith	of diatoms?
21.	<ul> <li>India's seed vault for protecting the see</li> <li>A) Kaza (Lahaul and Spiti)</li> <li>C) Chang La (Ladakh)</li> </ul>	eds especially of crops is located B) Kalpa (Kinnaur) D) Kargil (Ladakh)	at
22.	Bull Kelp is the common name of     A) Laminaria hyperborean     C) Ascophyllum nodosum	B) Durvillaea antarctica	
23.	. Which of the following is not a C4 plant A) Maize B) Barley	? C) Sugarcane	D) Sorghum
24.	<ul> <li>Drooping junipers are the characteristic</li> <li>A) Littoral and Swamp forests</li> <li>C) Alpine forests</li> </ul>	trees of B) Moist tropical forest D) Sub-tropical forests	ts
25.	. Which of the following members of oon A) Pythium oligandrum C) Aphanomyces euteiches	nycetes is used as a biocontrol a B) Saprolegnia mixta D) Plasmopara viticola	ngent?
26.	<ul> <li>Which of the following green algae is re</li> <li>A) Chlorella vulgaris</li> <li>C) Volvox aureus</li> </ul>	sponsible for causing the pheno B) <i>Chlamydomonas niv</i> D) <i>Chara elegans</i>	

B) Genetic drift C) Gene transfer

D) Gene migration

A) Gene flow

	t <i>ürlichen Pflanze</i> Bentham and Ho	<i>nfamilien</i> is related to ooker	 B) Engler and Prantl	
C)	Takhtajan		D) Hutchinson	
	of the following Porella	is an example of leafy liv B) <i>Riccia</i>	verwort? C) Nothoceros	D) Marchantia
	of the following Sunflower	contains inverted cortica B) <i>Nyctanthes</i>	al vascular bundles? C) <i>Boerhavia</i>	D) Bougainvillea
	n is found in the Mustard	ovary of B) Sunflower	C) Petunia	D) Pea
A)	of the following Amanita bispor Amanita phalloid	-	mmonly known as "Dea B) <i>Amanita ocreata</i> D) <i>Amanita verna</i>	nth Cap"?
A)	of the following Potato Scab Early Blight of Po	•	ociated with the famine B) Late Blight of Potato D) Brown Rot of Potato	
A)	n of the followin Avocado Sun B Potato Spindle 1		to be identified? B) Eggplant Latent Viro D) Peach Latent Mosai	
	mong the follow de Candolle	ing is known as the fathe B) Linnaeus	•	eophrastus
A)	of the following Cuminum cymi Foeniculum vulg		Ajwain? B) Ferula communis D) Trachyspermum am	nmi
A)	is a type of Fossilized tree Fruit	resin	B) Inflorescence D) Woody climber	

37.		of the following Dried leaves	parts of clove is used as B) Dried seeds	flavouring material? C) Floral buds	D) Young fruits		
38.	A muta	_	es a codon specifying a	different amino acid to o	one of the stop codons is		
		Leaky mutatior Missense mutat		B) Nonsense mutation D) Null mutation			
39.	_	n reaction is a sp RNA	pecific test to check the p B) Proteins	oresence of C) Fats	D) DNA		
40.		of the following Pribnow box	refers to the recognition B) TATA box	n site in promoter region C) CRP box	of a <i>lac</i> operon? D) Cga box		
41.		of the following Tryptophan	amino acids is aromatic B) Glycine	in nature? C) Glutamic acid	D) Alanine		
42.	A)	photophosphory Both PS I and P PS II only		B) Either PS I or PS II D) PS I only			
43.	<ul> <li>Which of the following is true about Nastic movements?</li> <li>A) Non-directional only</li> <li>B) Reversible only</li> <li>C) Both reversible and non-directional</li> <li>D) Neither reversible nor non-directional</li> </ul>						
44.		of the following $R_{\rm 0}$	is the symbol for net rep B) $I_x$	productive rate? C) λ	D) m <sub>x</sub>		
45.	A)	error in statistica Standard error False negative	al hypothesis testing is al	so known as B) False neutral D) False positive			
46.	A)	of the following Digital Object I Data Operating		a serial code for electror B) Digital Object Identif a object Identifier			

	A) Pinus	B) Picea	C) Abies	D) Ginkgo		
<b>Λ</b> Ω	Farn Acrostichum	<i>aureum</i> is well adap	ted to			
<b>∓</b> 0.	A) Salt marshes	direalli is well adap		 Ieathlands		
	C) Open exposed a	areas	,	ic conditions		
49.	Long fibre of cotto A) Coir	n seed is known as B) Fuzz	 C) Flax	D) Lint		
50.	Medicinally import genera?	ant Ginseng, a slow	growing pere	nnial plant bel	ongs to which of the follo	wing
	A) Panicum	B) Pandanus	C) <i>P</i>	anax	D) Papaver	
			X-X-X			

**47.** Sulphur shower relates to.....

# Chemistry(1068)

1.	The rotational spectrum of a rigid diatomic rotor consists of equally spaced lines spacing equal to:					
	A) 2B	B) 3B/2	C)B/2	D)B		
2.	Consider an endothermic reaction A $\longrightarrow$ B with $E_b$ and $E_f$ as activation energies for the backward and forward reactions respectively, then: A) $E_b > E_f$ B) $E_b < E_f$ C) $E_b = E_f$ D) There is no definite relation between $E_b$ and $E_f$					
3.	For a cyclic process: A) Both $\Delta U$ =0 and $\Delta H$ =0 C) $\Delta U$ =0		B) $\Delta H=0$ D) $\Delta U=0$ and $\Delta H\neq 0$			
4.	'It is only the radiation actually absorbed producing a chemical reaction'.  A) Lambert law  C) Lambert-Beer law		by the reacting system that is effective in  B) Grothus-Draper Law D) Einstein-Stark Law			
5.	The temperature at whA) 10K	nich the average speed B) 20K	of $H_2$ equal that of $O_2$ C) 30K	at 320 K: D)40K		
6.	The second lower state of particle in a cubic A) Non-degenerate C) Six fold degenerate		box is: B) Doubly degenerate D) Triply degenerate			
7.	In polarography: A) E <sub>1/2</sub> varies with cor C) Migration current		<ul> <li>B) E<sub>1/2</sub> is always zero</li> <li>D) Diffusion current varies with concentration</li> </ul>			
8.	The correct point group $A) \ O_h$	•	C) D <sub>6h</sub>	D) C <sub>2h</sub>		
9.	The crystal system of a compound with unit cell dimensions a=0.387, b=0.387, c= 0.504 nm and $\alpha=\beta=90^{\circ}$ and $\gamma=120^{\circ}$ is:  A) Cubic  B) Orthorhombic  C) Rhombohedral  D) Hexagonal					
10.	,	on at 25°C, the Debye- Ll√μ	Huckel limiting law is B) $\log \gamma_{\pm} = 0.509   Z_{+}Z_{+}Z_{+}$ D) $\log \gamma_{\pm} = 0.509   Z_{+}Z_{+}Z_{+}Z_{+}$	s given by: Z.lu <sup>2</sup>		

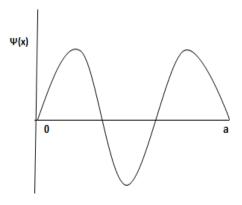

11. The standard electrode potential  $\boldsymbol{E}^0$  at a fixed temperature and in a given medium is dependent on

- A) Only the electrode composition
- B) The electrode composition and the extent of the reaction
- C) The extent of the electrode reaction only
- D) The electrode reaction and the electrode composition
- **12.** A wave function  $(\psi)$  is not acceptable when:
  - A) When first derivative of  $\psi$  is continuous B) When  $\psi$  is single valued

C) When  $\psi$  is infinite

D) When  $\psi$  vanish at infinite

13.

The given wave function graph in one-dimensional box of length, a, corresponds to energy equal to (where, m is mass of particle):

- A)  $3h^2/8ma^2$
- B)  $2h^2/8ma$
- C)  $9h^2/8ma^2$
- D) 2h/8ma<sup>2</sup>
- **14.** Soap essentially form a colloidal solution in water and remove the greasy matter by:
  - A) Coagulation
- B) Emulsification
- C) Adsorption
- D) Absorption

- **15.** The lowest allowed energy is equal to zero for
  - A) The hydrogen atom

B) A rigid rotor

C) A harmonic oscillator

- D) A particle in a 3-dimentional box
- **16.** At high altitudes, the boiling point of water gets lowered because
  - A) Temperature is low

- B) Atmospheric pressure is low
- C) Atmospheric pressure is high
- D) High vapour pressure
- **17.** The cell constant of a conductivity cell:
  - A) Changes with change of electrolyte
  - B) Changes with temperature of electrolyte
  - C) Remains constant for a cell
  - D) Changes with change of concentration of electrolyte
- **18.** Among the following the one which is EPR active is:
  - A) Ni(CO)<sub>4</sub>
- B)  $[Cu(C_2O_4)]^{2-}$  C)  $Mo(CO)_6$
- D)  $[Co(NH_3)_5Cl]^{2+}$

**19.** Generally octahedral clusters are formed by:

	A) Se, Y, La	B) Zn, Cd, Hg	C) Mo, Nb, Ta	D) Mo, Nb, Tl		
20.	Cerium oxide contair as:	ning special variety gla	ass, which cuts off ult	raviolet rays, is known		
	A) Crookes glass	B) Jena glass	C) Flint glass	D) Pyrex glass		
21.	The ion that gets read A) Dy	ily hydrolysed is: B) Nd	C) Eu	D) Er		
		mically unstable and a B) [Co(H <sub>2</sub> O) <sub>6</sub> ] <sup>2+</sup>		D) [Co(NH <sub>3</sub> ) <sub>6</sub> ] <sup>2+</sup>		
23.	A) Tetrahedral complexes only C) Complexes with no centre of symmetry					
24.	Which transition meta A) Cobalt	al is present in carbonic B) Nickel	c anhydrase? C) Zinc	D) Manganese		
25.	order			x, y, z. They are in the		
	A) x < y < z	B) z < x = y	C) x = y = z	D) $x = y < z$		
26.		ng is the first chemical B) Rn[PtF <sub>6</sub> ]	compound of the noble C) Ar[PtF <sub>6</sub> ]	e gases? D) Kr[PtF <sub>6</sub> ]		
27.	Cold solution of barium nitrite on mixing with sulphuric acid produces:  A) BaSO <sub>4</sub> + NO <sub>2</sub> B) BaSO <sub>4</sub> + HNO <sub>3</sub> C) BaSO <sub>4</sub> + HNO <sub>2</sub> D) BaSO <sub>4</sub> + N <sub>2</sub> + O <sub>2</sub>					
28.	Nitric oxide is parama A) Gaseous state		C) Solid state	D) Polymeric state		
29.	The styx code for dibe A) 2020	orane is: B) 2200	C) 2002	D) 0220		
30.	<b>).</b> Microcosmic salt when heated strongly, a transparent bead is formed which is us identification of:					
	A) ZnO	B) Al <sub>2</sub> O <sub>3</sub>	C) $Fe_2O_3$	D) SiO <sub>2</sub>		
31.	Which has the least m A) LiCl	nolar solubility in H <sub>2</sub> Oʻ B) NaCl	? C) KCl	D) CsCl		
32.	The shape of XeOF <sub>5</sub> <sup>-</sup> A) Octahedral C) Pentagonal pyrami		B) Distorted octahedral D) Pentagonal bipyramidal			

- **33.** From molecular orbital configuration of CO and NO<sup>+</sup>, we would predict:
  - A) Both have a Bond order of 3
  - B) Both are paramagnetic
  - C) Both will readily lose an electron to form CO<sup>+</sup> or NO<sup>2+</sup>
  - D) Both CO and NO<sup>+</sup> should not exist
- **34.** Among the following diatomic molecules, which one will show EPR signal?
  - A) Li<sub>2</sub>
- $B) B_2$
- $C) C_2$
- D)  $\tilde{N}_2$
- 35. What is the main factor on which chemical shift depends in Mossbauer spectra?
  - A) Electron density

B) Transition energy

C) Intensity of light

- D) All of these
- **36.** Assign R / S configuration at C-1, C-2 and C-5 in the following compounds.

- A) 1R,2S,5R
- B) 1R,2R,5R
- C) 1S,2S,5R
- D) 1R,2S,5S
- **37.** Singlet and triplet carbene can be distinguish by reaction with :
  - A) Cyclobutane
- B) cis-Butene
- C) iso-Butane
- D) n-Butane

**38.** Predict the product X of the following reaction:

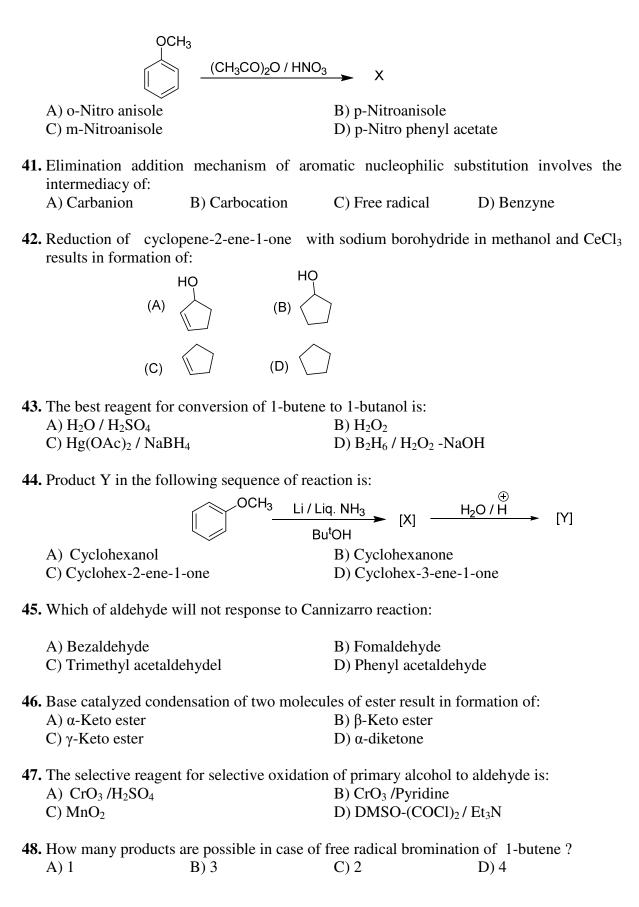

$$\begin{array}{c|c}
CH_2 \\
\hline
 & KCN \\
\hline
 & CH_2CN \\
\hline
 & CH_2 \\
\hline
 & CN \\
\hline
 & CH_3 \\
\hline
 & (C) \\
\hline
 & (D) \\
\hline$$

- **39.** The major product formed by reaction of benzene withy isobutyl alcohol in presence of con.H<sub>2</sub>SO<sub>4</sub> is:
  - A) sec.-Butyl benzene

B) *n*-Butyl benzene

C) iso-Butyl benzene

- D) tert.-Butyl benzene
- **40.** The major product X in the following reaction is:

- **49.** Relative intensity of M<sup>+</sup>, M<sup>+</sup>+2 and M<sup>+</sup>+4 peaks in mass spectra of 1,3-dibromopropane is:
  - A) 1:2:1
- B) 4:6:1
- C) 2:6:1
- D) 3:6:1

**50.** The following reaction is an example of:

- A) [1,3] sigmatropic shift
- C) [2,3]sigmatropic shift

- B) [4,3]sigmatropic shift
- D) [3,3]sigmatropic shift

*x-x-x* 

### **Environment Studies (1068)**

1.	organic state?					
	A) Assam	B) Arunachal	C) Gujarat	D) Sikkim		
2.	Noise level of 50 dB A) $10^{-5}$ Wm <sup>-2</sup>	corresponds to sound i B) 10 <sup>-7</sup> Wm <sup>-2</sup>	intensity of C) $10^{-3}$ Wm <sup>-2</sup>	D) 10 <sup>-9</sup> Wm <sup>-2</sup>		
3.		ng is an eco-friendly for some some some some some some some some	-	as a disinfectant and is a riptures?  D) Bermuda		
4.	Consider the followir	ng statements:				
	1. Thermal power pla	nts are major contribu	tors of fly ash.			
	2. ESP's are used to o	capture fly ash.				
	3. Flyash bricks are lo	ow in strength but eco-	friendly.			
Which	of the statements give	en above is/are correct	?			
	A) Only 1	B) Only 2	C) 1 & 2	D) 1, 2 &3		
5.		eams. As These unique		f living trees into robust re found in D) Tamil Nadu		
6.	<ul> <li>'Bio Carbon Fund Initiative for Sustainable Forest Landscapes' is managed by the</li> <li>A) World Bank</li> <li>B) Asian Development Bank</li> <li>C) International Monetary Fund</li> <li>D) United Nations Environment Programme</li> </ul>					
7.	<ul> <li>Which one of the following is the best description of the term 'ecosystem'?</li> <li>A) A community of organisms interacting with one another.</li> <li>B) A community of organisms together with the environment in which they live</li> <li>C) That part of the Earth which is inhabited by living organisms.</li> <li>D) The flora and fauna of a geographical area</li> </ul>					
8.	With reference to bio-to	oilets used by the Indian	Railways, consider the f	following statements:		
	1. The decomposition of	of human waste in the bio	o-toilets is initiated by fu	ingal inoculums.		

2. Ammonia and water vapour are the only end products in this decomposition which are

Which of the statements given above is/are correct?

released into the atmosphere.

	A) 1 only	B) 2 only	C) Both 1 and 2	D) Neither 1 nor 2		
9.	<ul> <li>The Genetic Engineering Appraisal Committee is constituted under the</li> <li>A) Wildlife (Protection) Act, 1972</li> <li>B) Environment (Protection) Act, 1986</li> <li>C) Geographical Indications of Goods (Registration and Protection) Act, 1999</li> <li>D) Food Safety and Standards Act, 2006</li> </ul>					
10	. Consider the following	ng States:				
	1. Arunachal Pradesh	l				
	2. Himachal Pradesh					
	3. Mizoram					
In whi	ch of the above States	do 'Tropical Wet Ever	green Forests' occur?			
	A) 1 only	B) 1 and 3 only	C) 2 and 3 only	D) 1, 2 and 3		
	<ul> <li>11. In the Mekong-Ganga Cooperation, an initiative of six countries, which of the following is/are not a participant/ participants?</li> <li>1. Bangladesh</li> <li>2. Cambodia</li> <li>3. China</li> <li>4. Myanmar</li> <li>5. Thailand</li> <li>Select the correct answer using the code given below.</li> </ul>					
	A) 1 only	B) 1 and 3 only	C) 2, 3 and 4	D) 1, 2 and 5		
12	. Consider the following	ng statements				
		n blow between 30° as Westerlies.	N and 60° S latitude	es throughout the year		
	2. The moist air masses that cause winter rains in North-Western region of India are part of westerlies.					
Which	Which of the statements given above is/are correct?					
	A) 1 only	B) 2 only	C) Both 1 and 2	D) Neither 1 nor 2		
13	<ul><li>13. Tides occur in the oceans and seas due to which among the following?</li><li>1. Gravitational force of the Sun</li></ul>					
	2. Gravitation	al force of the Moon				
	3. Centrifugal force of the Earth					

Select the correct answer using the code given below.						
	A) 1 only	B) 2 and 3 only	C) 1 and 3 only	D) 1, 2 and 3		
14	<ul><li>14. "Each day is more or less the same, the morning is clear and bright with a sea breeze; as the Sun climbs high in the sky, heat mounts up, dark clouds form, then rain comes with thunder and lightning. But rain is soon over." Which of the following regions is described in the above passage?</li><li>A) Savannah B) Equatorial C) Frigid D) Mediterranean</li></ul>					
	<ul> <li>15. Which one of the following best describes the main objective of 'Seed Village Concept'?</li> <li>A) Encouraging the farmers to use their own farm seeds and discouraging them to buy the seeds from others</li> <li>B) Involving the farmers for training in quality seed production and thereby to make available quality seeds to others at appropriate time and affordable cost</li> <li>C) Earmarking some villages exclusively for the production of certified seeds</li> <li>D) Identifying the entrepreneurs in village and providing them technology and finance to set up seed companies</li> <li>16. Which of the following has/have been accorded 'Geographical Indication' status?</li> </ul>					
	1. Banaras Brocades and Sarees					
	2. Rajasthani Daal-Ba	ati-Churma				
	3. Tirupathi Laddu					
Select	the correct answer usi	ng the code given belo	w.			
	A) 1 only	B) 2 and 3 only	C) 1 and 3 only	D) 1, 2 and 3		
17.	Siderite is an ore of A) Nickel	B) Chromium	C) Molybdenum	D) Iron		
18		following pair of Sta	ntes of India indicate	s the easternmost and		
	westernmost State? A) Assam and Rajasthan B) Assam and Gujarat C) Arunachal Pradesh and Rajasthan D) Arunachal Pradesh and Gujarat					
19	19. The primitive atmosphere of earth consisted of A) CO2, NO2, NH3, SO2 B) H2, NH3, CH4, H2O C) CO, N2O3, SO3, H3N D) He, Ne, Ar, Kr					
20	The sound power from A) 120 dB	m a voice shouting is 0 B) 90 dB	0.001 Watt. The sound C) 60 dB	level in dB is D) 30 dB		
21	21. Consider the following pairs:					

Place o	of Pilgrimage:	Location	n			
	1. Srisailam : Nallamalai Hills					
	2. Omkareshwar : Satmala Hills					
	3. Pushkar : Mahadeo Hills					
Which	of the above p	pairs is/a	re correctly matched?			
	A) 1 only		B) 2 and 3 only	C) 1 and 3 only	D) 1, 2 and 3	
22.	With reference is/are correct		gong', a mammal foun	d in India, which of th	ne following statements	
	1. It is herbiv	orous ma	arine animal.			
	2. It is found along the entire coast of India.					
	3. It is give 197	_	protection under Sc	hedule I of the Wil	dlife (Protection) Act,	
Select	the correct ans	swer usin	ng the code given below	w.		
	A) 1 and 2		B) 2 and 3	C) 1 and 3	D) 3 only	
23.	With reference statements is/			ogy in health sector,	which of the following	
	1. Targeted d	rug deliv	very is made possible b	y nanotechnology.		
	2. Nanotechn	ology ca	n largely contribute to	gene therapy.		
Select 1	the correct ans	swer usir	ng the code given below	w.		
	A) 1 only		B) 2 Only	C) Both 1 and 2	D) Neither 1 nor 2	
24.	Which one of A) Saltwater C) Gangetic	crocodil	_	quatic animal of India B) Olive ridley turtle D) Gharial	?	
25.		est and dastal And	leciduous forest? dhra Pradesh	ndia has a combination  B) South-West Benga D) Andaman and Nic

	C) Positron decay		D) Electron capture		
41	Which of the following is	sotonic methods is hes	t suited to date biotite?		
	A) Rb-Sr & Sm-Nd	sotopie memous is ses	B) K-Ar & Rb-Sr		
	C) Ar-Ar & Sm-Nd		D) U-Pb and Sm-Nd		
42	Which of the following is	sotones are radioactive	.9		
72.	A) <sup>147</sup> Sm & <sup>148</sup> Sm			D) <sup>147</sup> Sm & <sup>152</sup> Sm	
43.	Eötvös correction is nece	ssary if gravity is mea			
	A) In a moving vehicle		B) In a stationary veh	nicle	
	C) Below sea level		D) Above sea level		
44.	For an oceanic profile, th	e Bouger anomaly is r	nore strongly		
	A) Positive at the axis of	ridge			
	B) Positive at distances b	•	the ridge		
	C) Negative at the axis of	•			
	D) Negative at distances	beyond 1000 km from	the ridge		

45. What	percentage of water	er on Earth is po	table?	
A) 20	%	B) 78 %	C) 8 %	D) Less than 1 %
46. What	are the three comp	onents of hydra	ulic head?	
A) <b>G</b>	ravitational energy	+ Static energy-	Elevation energy	
B) Th	nermal energy + St	atic energy+ Ele	evation energy	
C) Ki	inetic energy + Pre	ssure energy + I	Elevation energy	
D) El	lastic potential ener	rgy+ Pressure er	nergy + Elevation energy	y
47. The c	hange in the head p	er unit distance	is called	
A) Hy	draulic gradient		B) Hydraulic co	onductivity
C) Sp	ecific yield		D) Specific stor	rage
48. What	is the maximum pe	ermissible level	for nitrates in drinking v	water?
A) 45	ppm	B) 45 ppb	C) 10 ppm	D) 10 ppb
		•	ion produced with a speci g its scattered radiance, is	•
A) Pa	assive remote sensi	ng	B) Active remo	te sensing
,	eutral remote sensi	_	D) Normal rem	<u>e</u>
50. The ch	anges in the reflective	vity/emissivity wi	th time, is called	
A) To	emporal variation		B) Temporary v	variation
,	pectral variation		D) Spatial varia

## Home Science(1068)

1.			<ul><li>B) To prevent spoilage</li><li>D) To inactivate the enzymes</li></ul>	
2.	Which one of the followard A) Tatami	owing is not a tradition  B) Kimono	nal Japanesecostume C) Zanshi	D) Yukata
3.	Which is the first order A) Solitary play	er of the development of B) Dual play	of play amongst childr C) Parental play	en D) Peer play
4.		ng foods is rich in ome B) Rice bran oil	ga 3 fatty acids C) Almonds	D) Walnuts
5.	The bobbin in a sewin A) Oscillating hook	ng machine is fixed on B) Pressure foot	the C) Feed dog	D) Thread lever
6.	A gluten free diet is g A) Crohn's disease C) Irritable bowel sy	-	B) Celiac disease D) Liver disease	
7.	A kantha embroidery A) Sujani	ceremonial bedspread B) Suber	is known as C) Sangli	D) Sainchi
8.	A situation in which known as A) Symposium	all the participants ar	re involved in the disc C) Public speaking	cussion of a problem is  D) Brainstorming
9.	Releasing pent up em A) Emotional cathars C) Emotional control	sis	B) Emotional breakdo D) Emotional security	
10.	Sociometry is a tool v A) Knowledge about	which measures a child society	's B) Knowledge about	sociology

	C) Intelligence quotie	ent	D) Relationship with	peers
11.	The addition of black A) Chroma	colour to any colour is B) Shade	s known as C) Tint	D) Colour intensity
12.	The limiting amino ac A) Lysine	eid in pulses is B) Tryptophan	C) Methionine	D) Arginine
13.	Which of the followin	ng is a neutral colour B) Red	C) Green	D) White
14.	The human developm A) Non specific	ental pattern is B) Predictive	C) Haphazard	D) Indefinite
15.	The Act which govern A) Consumer Redres C) Consumer Mercha		es redressal forum is B) Consumer Protecti D) BIS Act	ion Act
16.	Several garments can A) Firm press	be finished together by B) Buck press	y which of the following C) Die press	ng finishes D) Tunnel press
17.	Inner time clock chan A) Digestion	ges refer to B) Growth	C) Maturation	D) Learning
18.	<ul><li>A) Attaining goals by</li><li>B) Attaining goals by</li><li>C) Attaining goals by</li></ul>	esource Management is optimum use of resou fulfilling responsibility hard work delegating responsibi	rces ties	
19.	Enuresis is associated A) Spitting	with B) Bed wetting	C) Biting	D) Mental retardation
20.	Lesions at the corners A) Vitamin E	of the mouth occur in B) Iron	deficiency of C) Vitamin C	D) Vitamin B
21.	Right to survival of ch	nildren is		

	<ul><li>A) Right to express</li><li>C) Right to entertain</li></ul>	ment	B) Right to education D) Right to health and	
22.	Which of the following A) Light	ng is not a principle of B) Harmony	textile design C) Rhythm	D) Balance
23.	Which of the followir  A) Self Help Groups  C) Village Panchayat		ee tier system of Panch B) Mahila Mandals D) Anganwadis	nayati Raj
24.	Which of the following A) Proximodistal	ng principles mean that B) Continuous	development takes pla C) Linear	ace from head to toe  D) Cephalocaudal
25.	Tube feeding is also k A) Oral nutrition	nown as B) Nasal nutrition	C) Enteral nutrition	D) Parenteral nutrition
26.	A bland diet easy to c A) Soft diet	hew and digest is  B) Semi solid diet	C) Fluid diet	D) Full fluid diet
27.	Which of the follow fabrics  A) Double fold	ing is not a correct B) Lengthwise fold		ntting of unidirectional  D) Open
28.	International Literacy A) 8 <sup>th</sup> October	day is observed on B) 8 <sup>th</sup> September	C) 7 <sup>th</sup> October	D) 7 <sup>th</sup> September
29.	The term Golden Rec A) Lines	tangle refers to B) Geometric pattern	C) Proportion	D) Form
	All chemical reaction A) Oxidation The function of EGO A) Reality principle	B) Catabolism	C) Anabolism	D) Metabolism D) Dreams
32.	Design repeat does no A) Mirror	ot happen in B) Drop	C) Satin	D) Rotary

33.	HDL is synthesised an A) Muscle	nd secreted from B) Heart	C) Pancreas	D) Liver
34.	Chi square is applied A) When the data is i B) To check accuracy C) When there are se D) When the data is o	y of data veral groups for comp	arison	
35.	Which is the lowest so A) Interval scale	cale of measurement B) Ordinal scale	C) Nominal scale	D) Ratio scale
36.	A) E. Coli C) Clostridium botuli	·	B) Lactobacillus D) Salmonella	
37.	Which of the following A) Solitary play	ng does not promote la B) Story telling	nguage development in C) Social interaction	
38.	The quality of any res  A) The duration of re  C) The total expendit	esearch	by B) The objectives of a D) The title of the res	
39.	A mentally challenged A) 0-25	d child who can be edu B) 25-50	ucated has an IQ of C) 50-75	D) 75-100
40.	Vanaspati is an adulte A) Biscuits	erant in B) Milk	C) Dhesi Ghee	D) Samosas
41.	Organisation chart is a A) Management Tree C) Power Chart		B) Flow Chart D) Action Chart	
42.	Which is the chemical A) Benzene C) Potassium Bisulph		fruits B) Gun Powder D) Calcium Carbide	

43.	Which of these is not A) Polyuria C) Oliguria	t a symptom of kidney	failure B) GFR 20ml or less D) Oedema	/ minute
	C) Onguna		D) Ocacina	
44.	PEM in early stages in A) Biochemical Test C) Pathological Test		ssed by B) Anthropometry D) Clinical Examina	tion
45.	Anemia caused by V A) Megaloblastic	itamin B12 deficiency B) Sickle Cell	is C) Pernicious	D) Microblastic
46.	Reading disability is A) ADD	called B) Dysgraphia	C) Dyslexia	D) Aphasia
47.	Under National Miss are called A) Mahila Vigyaan I C) Rashtriya Mahila	Kendra	for Women the centre  B) Poorna Shakti Ke  D) Mahila Vikas Ker	
48.	Which of the followi A) Bluish Green	ng is not a cool colour B) Yellow Orange	C) Blue	D) Green
49.	The method of resear A) Case Study	rch used for conducting B) Headcount	g census every ten year C) Interview	rs is D) Survey
50.	Which of the follow through non formal e	_	the use of knowledge	e and abilities acquired
	<ul><li>A) Personal Develop</li><li>C) Competency in de</li></ul>		B) Involvement in co D) Increased self em	ommunity activities ployment opportunities

#### **Human Genomics**(1068)

1.	of the following strar A) Length 1000 base B) Length 2000 base C) Length 2000 base	nation in form of bases and of the DNA will have swith 10% G content as with 10% A content as with 40% T content as with 25% C content		on of G=C, A=T. Which ion content?
2.	Beating of cilia is reg A) Actin	gulated by B) Myosin	C) Cofilin	D) Nexin
3.	<ul> <li>The main difference between normal and transformed cells are</li> <li>A) Immortality and contact inhibition</li> <li>B) Shorter generation time and cell mobility</li> <li>C) Apoptosis and tumor suppressor gene hyperfunction</li> <li>D) Inactivation of oncogenes and shorter cell cycle duration</li> </ul>			
4.	When bacteria are gr membrane lipids with A) Short chain satura C) Long chain satura	n ted fatty acids	ned at 37 C, they are  B) Short chain unsat D) Long chain unsat	•
5.	cytoplasm? A) Nuclear export set B) NES and zinc fing	quence (NES) and leuger motif on sequence (NLS), zi	cine zipper	eroid receptor located in
6.	The most commonly A) Mitochondrial DN C) Ribosomal RNA	tool used for phyloger NA	netic analysis involves B) Mitochondrial Rl D) Ribosomal DNA	NA
7.		to monitor changes in which technique he w		m protein for which an
	A) Immunofluoresce C) ELISA	nce microscopy	B) Fluorescence <i>in s</i> D) FACS	situ hybridization
8.	containing 15N label		nes were then extracte	sis was fed with medium d. Treatment with which d purines?
9.	Enzymes accelerate a	reaction by which on	e of the following stra	tegies?

	<ul><li>B) Increasing kinetic</li><li>C) Increasing the free</li></ul>	required to form the t energy of the substrate energy difference bet n over number of enzym	e ween substrate and the	product
10.	used to see living cell A) A living cell cannot B) The viewer's ey projector's screen C) A microscope prod	Is because of be placed in a film prove is close to a mice	projector croscope whereas it whereas a projector pro	a film projector is not is far away from the oduces a real image.
11.	The ionic strength of A) 0.2 M	a 0.2 M Na2HPO4 sol B) 0.4 M	ution will be C) 0.6 M	D) 0.8 M
12.	How many moles of No.=6 x 10 <sup>23</sup> ]	genomic DNA is pre	esent in the bacterium	elle which is 10 <sup>9</sup> bp long. ? [Consider Avogadro
13.	It takes 40 minutes: Simultaneous to the completed before the at 37°C in complex m	for a typical E. coli ongoing replication, 2 cell divides. What wo	20 minutes of a freshould be the generation	D) 6 x 10 <sup>23</sup> plicate its chromosome. round of replication is time of E. Coli growing  D) 30 minutes
14.	Which one of the followard (A) 5-bromouracil (C) Acridine orange	owing chemicals is a I	ONA intercalator?  B) Ethyl methane sul  D) UV	fonate
15.	An antibiotic that rese A) Streptomycin	embles the 3'end of a c B) Puromycin	charged tRNA molecul C) Sparsomycin	e is: D) Tetracycline
16.	gene locus and the ce	entromere of the chror ocur during meiosis at	_	as occurred between the on of the two alleles of and II
17.		s solution of glycerol? ectroscopy		te the concentration of

- **18.** A gene expressing a 50 kDa protein from an eukaryote was cloned in an E. coli plasmid under the lac promoter and operator . Upon addition of IPTG, the 50 kDa protein was not detected. Which one of the following explains the above observation?
  - A) The cloned sequence lacked the Kozak sequence
  - B) E. Coli does not make proteins larger than 40 kDa
  - C) Differences in codon preference
  - D) 50 kDa protein contains a nuclear localization signal
- **19.** For identification of three proteins moving together (as a single band) upon loading in a single lane of a SDS-PAGE gel, the best method is:
  - A) One step western blotting
  - B) NMR spectroscopy
  - C) Western blott followed by stripping and reprobing
  - D) UV spectroscopy
- **20.** Which one of the following techniques will you use to identify more than 1000 differentially expressed genes in normal and tumor tissues in one single experiment?

A) RAPD

B) Genome sequencing

C) ChIP assay

- D) Transcriptome analysis
- **21.** Which one of the following statements is correct?
  - A) In all L-amino acids, only the Cα carbon atom is chiral
  - B) Deoxyribose is optically inactive
  - C) The specific rotation of sucrose will be the sum of the specific rotations of D- glucose and D-fructose
  - D) Phosphatidyl choline isolated from biological membranes is optically active
- 22. You have labelled DNA in a bacterium by growing cells in medium containing either 14 N nitrogen or the heavier isotope, 15 N. Furthermore, you have isolated pure DNA from these organisms, and subjected it to CsCl density gradient centrifugation leading to their separation of light (14N) and heavy (15N) forms of DNA to different locations in the centrifuge tube. In the next experiment, bacteria were grown first in medium containing 15N, so that all the DNA made by cells will be in heavy form. Then these cells were transferred to medium containing only 14N and allowed the cells to divide for one generation. DNAs were extracted and centrifuged as above in the CsCl gradient. A hybrid DNA band was observed at a position located between and equidistant from the 15N and 14N DNA bands. Based on the above observation, which one of the following conclusions is correct?
  - A) Replication of DNA is conservative
  - B) Replication of DNA is semi conservative
  - C) Replication of DNA is dispersive
  - D) Replication of DNA is by rolling circle method
- **23.** Two siblings who inherit 50% of the genome from the mother and 50% from the father show lot of phenotypic differences. Which one of the following events during gametogenesis of the parents will maximally contribute to this difference?

	<ul><li>A) Mutation</li><li>C) Independent assortment</li></ul>	<ul><li>B) Recombination</li><li>D) Environment</li></ul>	
24.	Of the following, which one of the indivi- responsible for the mentioned trait?  A) A woman in a family where an autos mother and son are affected  B) A daughter of a man who is affected by a C) A father of a child who is affected with a D) A father of a boy affected with X-linked	somal dominant trait in X-linked dominant to autosomal recessive	is segregating and her
25.	If the probability of being blood type A is what is the probability of being either blood A) 5/8 B) 1/8		of blood type O is ½, D) 1/16
26.	A) Less than 50% C) Cannot be more than 50%	ty of 50%, then the ove B) More than 50% D) Can be less or more	·
27.	Histone deacytalase (HDAC) catalyses the r histones. Which amino acid of histone is inv A) Lysine B) Histidine		from N-terminal of D) Glutamate
28.	The effective strength of hydrogen bonds with A) Unaffected by water molecules C) Weakened by water molecules	ill be B) Strengthened by w D) Totally destroyed l	
29.	<ul> <li>Which one of the following statements is IN</li> <li>A) Quantitative inheritance results in a rang trait</li> <li>B) Polygenic traits often demonstrate contin</li> <li>C) Certain alleles of quantitative trait le character/trait</li> <li>D) Alleles governing quantitative traits do n</li> </ul>	nuous variation.  oci (QTL) have an a	additive effect on the
30.	Which of the following is not a unit of structure A) $\beta$ sheets B) $\alpha$ helices	ture found in proteins?  C) Loop regions	D) γ loops
	A mouse carrying two alleles of insulin —li whereas a mouse that carries two mutant al size of a heterozygous mouse carrying one parental origin of the wild type allele. Such A) Sex- linked inheritance  C) Gene environment interaction	leles lacking the grow normal and one mutan pattern of inheritance is B) Genome imprinting D) Cytoplasm inherita	th factor is dwarf. The at allele depends on the s known as
<i>3</i> 2.	. Which one of the following statements is IN	CORRECT?	

		ariation occurs within a leterious alleles presen		te to genetic drift. a population is called the
	C) Genetic erosion is	a reduction in levels o sion results from incre		or deleterious alleles.
33.	polymorphism (AFL)	P)?	-	olified -fragment length
	<ul><li>B) PCR amplification</li><li>C) Digestion of DNA</li></ul>	bination of random and n followed by digestion with restriction enzyn with restriction enzyn	with restriction enzynes followed by one l	ymes PCR step
34.	during DNA synthesi	is, is a specialised	-	replication of telomeres
	A) RNA dependent EC) DNA dependent F	- ·	B) DNA dependent D) RNA dependent	1 0
35.		ng following usually br	-	
	A) Proline	B) Glycine	C) Leucine	D) Valine
36.	a gene product?			gle amino acid change in
	A) Acridine orange	B) X-rays	C) EMS	D) Ethidium bromide
37.	Which one of the measurement?	following analytical	techniques does N	OT involve an optical
	A) ELISA		B) Microarray	nina aalawimatuv
	C) Flow cytometry		D) Differential scan	ning calorinleny
38.		ng is NOT an assumpti		-
	_	at random with respect ting on the locus in que	_	ion
	C) One allele is domi	inant and the other is re effectively infinite in s	ecessive at this locus	
39.		conducting a charge, v		eful in principle?
	A) Proteins only C) RNA only		B) DNA only D) DNA and RNA	both
40.	Coomassie brilliant b	olue binds to		
	A) Proteins specifica	<del>-</del>	B) Nucleic acids no	÷ •
	C) Proteins nonspecif	псапу	D) Nucleic acids sp	еситсану
41.	DNA mehtylation is	involved in		

	A) Replication	B) Transcription	C) Imprinting	D) Recombination
42.	Evolution is NOT a A) Process directed C) Random proces	d to a goal	B) Process which is D) Process which in	ongoing volves natural selection
43.	<ul><li>A) Free movement</li><li>B) Sites for bioche</li><li>C) Release of proto</li></ul>		acids across the memb	=
44.	Side chain of sering A) An electrophile C) Both as a nucleon	e can act as	B) A nucleophile D) Neither as a elec	trophile or nucleophile
45.	5. The van der Waals radius of an atom is A) A measure of the size of an atom C) A measure of its charge  B) A measure of the bond that atom forms D) A measure of its electric filed			
46.	The only genetical A) Glycine	ly encoded amino acid v B) Glutamate	vithout a stereoisomer i	is: D) Galactose
47.	<ul><li>B) The measureme</li><li>C) Precision of the</li></ul>	on gives of events with binary or ont of event in binary dig measurement in binary e measurement in binary	rits digits	
48.	Which of the follow A) Active transpor C) Translation by t		verned by molecular re B) Passive diffusion D) Transcription by	
49.	Palindromes are A) Inverted repeat C) Nucleosomes	sequences	B) Triplet repeats D) Double repeats	
50.	Which of the follow A) EF-Mu	wing is involved in the p	process of translation? C) EF-D	D) RF-3

#### **Medical Physics**

- 1. Which of the following is not an example of compressed data
  - A) Data array
  - B) Frequency distribution
  - C) Histogram
  - D) Ogive
- 2. The relationship between A.M., G.M. and H.M. is

A) G.M. = 
$$(A.M.) \times (H.M.)$$

B) 
$$(G.M.)^2 = (A.M.) \times (H.M.)$$

C) G.M. = 
$$(A.M. \times H.M.)^2$$

D) 
$$(G.M.)^2 = (A.M.)^2 \times (H.M.)^2$$

- **3.** Sampling distribution is usually the distribution of
  - A) Parameter
  - B) Variance
  - C) Mean
  - D) Statistics
- **4.** The interval estimate of a population mean with large sample size and known standard deviation is given by

A) 
$$\bar{x} \pm z_{\alpha/2} \sigma_{\bar{x}}$$

B) 
$$\bar{x} \pm z_{\alpha/2} s_{\bar{x}}$$

C) 
$$\bar{x} \pm t_{\alpha/2} \sigma_{\bar{x}}$$

D) 
$$\bar{x} \pm t_{\alpha/2} s_{\bar{x}}$$

- 5. If two regression lines are x + 3y + 7 = 0 and 2x + 5y = 12, then  $\bar{x}$  and  $\bar{y}$  are, respectively
  - A) 2, 1
  - B) 1, 2
  - C) 2, 3
  - D) 2, 4

6.	Which of the following statements regarding electromagnetic radiation is false?
	A) Travel at the speed of light $(3 \times 10^8 \text{ m/second})$ .
	B) Have a photon energy proportional to frequency.
	C) Travel at a speed proportional to frequency.
	D) The product of frequency and wavelength is constant.
7.	X-ray tube output is increased most strongly by increasing the
	A) Voltage across the tube (kVp)
	B) Anode diameter
	C) Atomic number (Z) of the target
	D) Tube current (mA)
8.	The heel effect is more pronounced
	A) at larger distances from the focal spot
	B) with a larger target (anode) angle
	C) with a smaller anode angle
	D) at the cathode edge of the x-ray field
9.	Which interaction dominates for 45 keV photons in water?
	A) Photoelectric effect
	B) Coherent scatter
	C) Photodisintegration
	D) Pair production
10.	The attenuation coefficient for diagnostic x-ray photons in soft tissue
	A) decreases to about 25 keV, then rises again
	B) increases continuously with increasing energy
	C) exhibits discontinuities at 69.5 keV
	D) decreases continuously with increasing energy
11.	The reason 12:1 grids are seldom used with portable radiography is because
	A) low voltage used is unable to penetrate grids
	B) accurate grid alignment is too difficult

C) scatter is not important in portable x-rays
D) air gaps are preferred to eliminate scatter
How many 5 MeV alpha particles are required to deposit total energy of 1 J? A) $1.25 \times 10^{12}$ alpha particles
B) $1.25 \times 10^{-13}$ alpha particles
C) $6.5 \times 10^{-13}$ alpha particles
D) $6.25 \times 10^{12}$ alpha particles
The alpha particles with energy of 5.5 MeV are fully stopped in a gas with W-value of 30 eV/ion pair and a Fano factor of 0.15. The expected average number of ion pairs $n_0$ produced in the gas is
A) $1.6 \times 10^{34}$ ion pairs
B) $6.1 \times 10^{34}$ ion pairs
C) $1.83 \times 10^5$ ion pairs
D) $3.81 \times 10^5$ ion pairs
The scintillation efficiency of anthracene if 1 MeV of particle energy loss creates 20300 photons with average wavelength of 447 nm are
A) 7.65 %
B) 5.63 %
C) 3.65 %
D) 5.68 %
Which scintillation material is most efficient at converting the energy of a 2 MeV electron into light?
A) $BaF_2$

A) BaF<sub>2</sub>
B) HPGe

C) NaI(Tl)

**12.** 

13.

14.

**15.** 

D)  $LaBr_3(Ce)$ 

**16.** The long-wavelength limit of the sensitivity of a photocathode layer with work function of 1.5 eV is

	A) 2250 Angstroms
	B) 1250 Angstroms
	C) 8270 Angstroms
	D) 7250 Angstroms
17.	The acceleration voltage required for a hybrid photomultiplier tube using a silicon diode to have a charge gain of 5000 is about
	A) 27.3 keV
	B) 17.9 keV
	C) 12.6 keV
	D) 13.0 keV
18.	If the energy resolution of a particular NaI(Tl) scintillation detector is 7% for <sup>137</sup> Cs gamma rays (0.662 MeV), estimate its energy resolution for the 1.28 MeV gamma rays from <sup>22</sup> Na
	A) 0.0503
	B) 0.0305
	C) 0.5032
	D) 0.2035
19.	If the energy resolution of a scintillator is 8.5% at 662 KeV, the standard deviation (in energy units) of the Gaussian curve that would be a fit to the photopeak at that energy is
	A) 39.2 keV
	B) 29.3 keV
	C) 33.9 keV
	D) 23.9 keV
20.	The typical energy resolution for surface barrier detectors worsen as the surface area of the detector increases because of
	A) Resistance
	B) Capacitance
	C) Magnetic field

21.	Assume that the Fano factor in germanium were half the currently assumed value. Both the FWHM and energy resolution are			
	A) increased by $\sqrt{2}$			
	B) increased by 2			
	C) decreased by $\sqrt{2}$			
	D) decreased by 2			
22.	An incident fast neutron is moderated and then diffuses total path length of 10 cm before being captured in the BF <sub>3</sub> tube of a long counter. The time delay between the time of neutron incidence and the leading edge of the output pulse is			
	A) 55.5 micro seconds			
	B) 45.5 micro seconds			
	C) 25.5 micro seconds			
	D) 15.5 micro seconds			
23.	The stages required in a successive approximation ADC to achieve a conversion gain of 4096 channels is			
	A) 8 ADC steps			
	B) 24 ADC steps			
	C) 12 ADC steps			
	D) 96 ADC steps			
24.	A Wilkinson type ADC has a conversion gain of 2048 channels and a maximum conversion time of $25\mu s$ . The oscillator must operate at frequency is			
	A) 98.1 MHz			
	B) 81.9 MHz			
	C) 48.0 MHz.			
	D) 25.9 MHz.			
25.	The modulation transfer function (MTF) is not:			
	A) A description of any imaging system resolution performance			

B) The ratio of image to subject contrast at each spatial frequency

D) Electric field

	D) Fifty percent at half the limiting spatial resolution			
26.	26. The DICOM standard does not specify the image's			
	A) Reimbursement rate			
	B) Matrix size			
	C) Bit depth			
	D) Display settings			
27.	Breast imaging using MRI would not use			
	A) Fat-suppression techniques			
	B) Special breast coils			
	C) Iodine contrast			
	D) Three-dimensional imaging techniques			
28.	Which of the following is not a radiopharmaceutical localization mechanism?			
	(A) Diffusion			
	(B) Phagocytosis			
	(C) Capillary blockage			
	(D) Elution			
29.	An x-ray exposure of 1 mGy (100 mR) results in all of the following except			
	A) equivalent dose of 1 mSv (100 mrem) in bone			
	B) absorbed dose of 4 mGy (400 mrad) in bone			
	C) equivalent dose of 1 mSv (100 mrem) in tissue			
	D) absorbed dose of 1 mGy (100 mrad) in tissue			
30.	Positron emission tomography (PET) scanners generally make use of all of the following except			
	A) Short-lived radionuclides such as <sup>15</sup> O			
	B) Cyclotrons			
	C) Directly detected positrons			
	D) Filtered-back projection reconstruction algorithms			

C) Equal to the unity when the spatial resolution is perfect

31.	The chronic x-ray threshold dose for radiation-induced cataracts is about				
	A) 5 mGy (0.5 rad)				
	B) 50 mGy (5 rad)				
	C) 1 Gy (100 rad)				
	D) 5 Gy (500 rad)				
32.	. Which of the following artifacts does not appear in CT images?				
	A) Motion artifacts				
	B) Phase-encoding artifacts				
	C) Streak artifacts				
	D) Ring artifacts				
33.	Absorption of a 30 keV photon by a screen with a 10% conversion efficiency will emit how				
	many blue 3 eV light photons?				
	A) 10				
	B) 1				
	C) 100				
	D) 1000				
34.	An ultrasound beam travelling through tissue cannot be				
	A) Absorbed				
	B) Amplified				
	C) Scattered				
	D) Refracted				
35.	Blastoma is a cancer involving which tissue				
	Ç				
	A) Bone B) Connective tissue				
	C) Epithelial tissue  D) Embryonic tissue				
	D) Embryonic tissue				

36.	Which enzyme is produced by kidney when blood pressure falls?				
	A) Secretin B) Relaxin				
	C) Renin				
	D) Melanin				
37.	Which is the correct order of cellular radiosenstivity				
	A) Eyrthroblasts > Intestinal crypt cells > Spermatids > Chondrocytes				
	B) Intestinal crypt cells > Spermatids > Eyrthroblasts > Chondrocytes				
	C) Spermatids > Eyrthroblasts > Chondrocytes > Intestinal crypt cells				
	D) Spermatids > Eyrthroblasts > Intestinal crypt cells > Cchondrocytes				
38.	A typical in vitro mammalian cell survival curve for low-LET radiations is characterised by				
	A) Exponential curve				
	B) Continuosly curving survival curve				
	C) Initial shoulder followed by an exponential part				
	D) Bell curve				
39.	Lateral resolution in ultrasound imaging would most likely be improved by				
	A) Increasing transducer focusing				
	B) Imaging in the Fraunhofer zone				
	C) Reducing the pulse length				
	D) Increasing the frequency				
40.	For most tissues, which of the following is false?				
	A) T1 and T2 often increase with malignancy.				
	B) T2 is relatively independent of field strength.				
	C) T1 increases as field strength increases.				
	D) T1 is of the order of a few seconds				
41.	Electron capture does not				
	A) result in the emission of a neutrino				

	B) can compete with positron emission			
	C) Result in internal conversion electron emission			
	D) result in characteristic x-ray emission			
42.	The largest ultrasound reflections occur between			
	A) Kidney and Water			
	B) Fat and Kidney			
	C) Brain and Water			
	D) Water and Muscle			
43.	How long will it take to receive the ultrasound echo from an object 10 cm away?			
	Α) 1.3 μs			
	Β) 13 μs			
	C) 130 µs			
	D) 13 ms			
44.	13. Which of the following does not concern itself with radiation risk estimates?			
	A) ICRP			
	B) UNSCEAR			
	C) BEIR			
	D) ICRU			
45.	If an ultrasound beam is attenuated by 99%, the attenuation is			
	(A) 3 dB			
	(B) 1 dB			
	(C) 20 dB			
	(D) 10 dB			
46.	What fraction of ultrasound is reflected from a liver $(Z = 1.55)$ and soft tissue $(Z = 1.65)$ interface?			
	A) 1/1000			
	B) 1/100			

	C) 1/10					
	D) 1/2					
47.	Increasing the width of the computed tomography (CT) image display window will reduce					
	A) quantum mottle					
	B) displayed contrast					
	C) section thickness					
	D) image brightness					
48.	Chemical shift artifacts are caused by differences in the					
	A) T1 relaxation time					
	B) T2 relaxation time					
	C) Spin density					
	D) Larmor frequency					
49.	The continuous spectrum obtained from X-ray tubes is due to					
	A) Transitions of atomic electrons from higher to lower energy levels					
	B) Deceleration of electrons when they hit the target					
	C) Conversion of electrons to electromagnetic energy					
	D) Thermionic emission					
50.	Which of the following is not a unit of energy?					
	A) Erg					
	B) Joule					
	C) Watt					
	D) British thermal unit (BTU)					
<i>x-x-x</i>	c					

## Microbial Biotechnology (1068)

1.	The Cartagena Protocol on Biosafety was ac	lopted in 2000 and en	tered into force by	
	A) August, 2002	B) August, 2000		
	C) September, 2001	D) September, 2003	3	
2.	A diagnosis of diptheria is confirmed by  A) Isolation of typical organisms from materials such as blood agar  B) Isolation of a typical colony on Tinsdale's agar  C) Demonstration of toxin production by suspicious isolate  D) Microscopic appearance of organisms stained with methylene blue			
3.	The kingdom Protista contains  A) Prokaryotic unicellular autotrophic organ  B) Eukaryotic unicellular photosynthetic/no  C) Prokaryotic multicellular heterotrophic or  D) Eukaryotic multicellular heterotrophic or	n-photosynthetic orga rganisms	nnisms	
4.	<ul> <li>Which of the following statements about a plot of V versus substrate concentration for an enzyme that follows Michaelis-Menten kinetics is false</li> <li>A) K<sub>m</sub> is the substrate concentration at which V=1/2 V<sub>max</sub></li> <li>B) The shape of the curve is a hyperbola</li> <li>C) As substrate concentration increases, the initial velocity of the reaction, V also increases</li> <li>D) At very high substrate concentration, the velocity curve becomes a horizontal line that intersects the y-axis at K<sub>m</sub></li> </ul>			
5.	Evidence indicating the chloroplasts were originally free-living prokaryotes that subsequently evolved a symbiotic relationship with a eukaryotic host includes all of the following except  A) Similarities of rRNA sequences between chloroplasts and free-living prokaryotes.  B) Similarities of structures between chloroplasts and some contemporary free-living prokaryotes  C) Presence of circular DNA in chloroplasts and in free-living prokaryotes  D) Ability of chloroplasts to synthesize all their own proteins.			
6.	Electron acceptor in anaerobic conditions in A) Fatty acids C) SO <sub>4</sub> , NO <sub>3-</sub> , CO <sub>2</sub>	prokaryotes is B) Glucose, fructose D) Antioxidants suc		
7.	The wavelengths of visible light are shorter A) Infrared B) Ultraviolet	than the wavelength (C) x-rays	of D) Gamma rays	

- 8. 2,4-dinitrophenol uncouples electron transport from ATP synthesis in mitochondria by
  - A) Causing dissipation of the proton gradient generated by the electron transport
  - B) Allowing the proton translocating function of ATP synthase while inhibiting its ATP synthesizing activity
  - C) Activating a second proton pump that sends back the protons into the mitochondrial matrix
  - D) Neutralizing the proton gradient by absorbing the protons generated during the electron transport
- **9.** What do you mean by "NA" in mass transfer?
  - A) Rate of oxygen transfer per unit volume of fluid
  - B) Rate of oxygen transfer per unit volume of gas
  - C) Avogadro number
  - D) Rate of oxygen transfer per unit mass of solid
- **10.** Which type of forces stretch and distort the bubbles?
  - A) Shear forces

B) Strain forces

C) Surface tension

D) Frictional forces

- 11. Which of the following statements about meiosis is not true?
  - A) Kinetochores of sister chromatids attach to opposite poles in Meiosis I
  - B) Kinetochores of sister chromatids attach to opposite poles in Meiosis II
  - C) Chiasma is formed in Prophase I
  - D) Homologous chromosomes are segregated in Meiosis I
- **12.** If a proteasome inhibitor is added to synchronously cycling human cells in G2 phase, which one of the following events is likely to happen?
  - A) Induce re-replication of DNA

B) Arrest cells in G2 phase

C) Arrest cells in anaphase

- D) Block chromatin condensation
- **13.** Which of the following is a correct hierarchial sequence for classifying a living organism?
  - A) Domain-Kingdom-Phylum-Class-Order-Family-Genus-Species
  - B) Kingdom-Domain-Phylum-Class-Order-Family-Genus-Species
  - C) Domain-Kingdom-Phylum- Order -Class -Family-Genus-Species
  - D) Kingdom -Domain -Phylum-Order- Class -Family-Genus-Species
- **14.** After activation of a promoter by the DNA binding activity of a transcription factor, a coactivator is recruited at the region targeted for transcription which in turn creates a

	of the co-activator is	responsible for the re	ecruitment of chroma	e of the following activities at in remodeling complex?
	<ul><li>A) Histone deacetyla</li><li>C) Histone acetyl trans</li></ul>	•	· · · · · · · · · · · · · · · · · · ·	I transferase activity ransferase activity
15.	The S wave of normal A) Septal and left ver B) Late depolarization C) Left to right septan D) Repolarization of	ntricular depolarization of the ventricular value of ven	on	wards the AV junction
16.	What phenotype wor for site-specific record	• •		g one of the genes required
	A) Decrease in T cell	count	B) Immunodefici	ent
	C) Increase in T cell	count	D) Increase in B	cell count
17.	transport of which io	n?	nce regulator (CFTR	R) is known to regulate the
	A) $Ca^{2+}$	$B) Mg^{2+}$	C) HCO <sub>3</sub>	D) Cl <sup>-</sup>
18.	Assuming Hardy-W frequency of the two A) 0.80		• • • •	ncy of heterozygotes, if the and 0.4, will be D) 0.32
19.	Major stimulus for sp	oore formation in bac	teria is	
	A) Nutrition limitation		B) Heat stress	
	C) Cold stress		D) pH stress	
20.	Which one of the fol result in the biosynth A) Mevalonic acid a B) Malonic acid and C) Shikimic acid and D) Shikimic acid and	esis of terpenes? nd MEP pathways MEP pathways l Malonic acid pathw	⁄ays	olite biosynthetic pathways
21.	Insulin increases faci A) Phosphorylation of B) Translocation of g C) Inhibition of the s D) Dephosphorylation	of glucose transporter collinguation of mRNA for the state of mRNA	rs ontaining endosomes or glucose transporter	into the cell membrane

- **22.** A culture medium contains two carbon sources, one is preferred carbon source (glucose) and the second is a non-preferred source (lactose). Which one of below is correct regarding the nature of growth curve of *E. coli* cultured in this medium?
  - A) Growth curve will be same as when grown in presence of only glucose
  - B) Growth curve will be same as when grown in presence of only lactose
  - C) A lag phase will be observed between the two exponential phases
  - D) Two lag phases will be observed between the two exponential phases
- 23. The major disadvantage of using liposome as a targeted drug delivery vehicle is that
  - A) It gets internalized by phagocytosis inside lysosomes
  - B) It is very unstable and has low shelf-life
  - C) It gets intercalated in cell membranes
  - D) Its drug entrapment efficiency is very low
- 24. Phosphatidyl serine, an important component of biological membrane, is located in
  - A) The outer leaflet but flip flops to inner leaflet under specific conditions
  - B) Both the leaflets
  - C) The middle of the bilayer
  - D) The inner leaflet but flip flops to outer leaflet under specific conditions
- **25.** If the core body temperature of a human rises above normal, which of the following processes would be initiated sequentially for thermo-regulation?
  - A) Peripheral vasodilation, increased rate of respiration, tachycardia
  - B) Peripheral vasodilation, increased rate of respiration, bradycardia
  - C) Peripheral vasodilation, decreased rate of respiration, tachycardia
  - D) Peripheral vasodilation, decreased rate of respiration, bradycardia
- **26.** Which of the following is not a characteristic of phylum chordata?

A) Pharyngeal slits

B) Amniotic egg

C) Postanal tail

D) Notochord

27. After isolating and purifying to homogeneity a small enzyme (110 amino acids long) from a culture of bacteria, you are confused as to whether you grew wild-type bacteria or mutant strain that produced the enzyme with a valine residue at position 66 instead of the glycine found in the wild-type strain. For quick determination of nature of protein you will use

A) Mass spectroscopy

B) Ion exchange chromatography

C) SDS-PAGE

D) HPLC

- **28.** Sequence tagged sites have which of the following properties?
  - A) They are present only once within a genome and possess an RFLP site
  - B) They are present only once within a genome and their sequence is known

- C) Their sequence is known and they must contain repetitive DNA sequences
- D) They must contain the sequences of a gene and no repetitive DNA sequences can be present
- 29. Life-history characteristics associated with k-selected organisms include
  - A) Rapid reproduction rates, short generation times and large body size
  - B) Repeated reproduction, few progeny and large body size
  - C) Inhabiting early successional state communities, rapid mutation rates and numerous large offsprings
  - D) Inhabiting climax communities, many small offsprings and short life span
- **30.** An X-linked recessive gene produces red-green color blindness in humans. A woman with normal color vision whose father was colorblind marries a colorblind man. What is the probability that their son will be colorblind?
  - A) 0 B) 1/4 C) ½ D) 3/4
- **31.** Which of these descriptions could be associated with the luteal phase of the uterine cycle?
  - A) Decrease in LH, increase in progesterone, corpus luteum present, secretory uterine lining
  - B) Decrease in LH, decrease in progesterone, corpus luteum present, secretory uterine lining
  - C) Increase in LH, increase in progesterone, corpus luteum present, endometrium released
  - D) Low FSH, high estrogen, developing follicle, increase in endometrium
- **32.** Which of the following statement provides a true example of both photomorphogenesis and phototropism?
  - A) Phototropism is a growth towards blue light, and photomorphogenesis is a growth towards red light
  - B) Phototropism is a growth towards blue light, and photomorphogenesis is a developmental process triggered by near-red light
  - C) Phototropism is a growth towards red light, and photomorphogenesis is a germination triggered by blue light
  - D) Phototropism is a movement towards blue light that does not involve growth and photomorphogenesis is a movement towards red light that does involve growth
- **33.** Some viruses can undergo latency, the ability to remain inactive for some period of time. Which of the following is an example?
  - A) Influenza, a particular strain of which returns every 10-20 years
  - B) Herpes simplex viruses whose reproduction is triggered by physiological or emotional stress in the host

- C) Koposi's sarcoma, which causes a skin cancer in people with AIDS, but rarely in those not infected by HIV
- D) The virus that causes a form of the common cold, which recurs in patients many times in their lives
- **34.** Advantages of the oral polio vaccine compared with the killed polio vaccine are all of the following except that it
  - A) Elicits IgA as well as IgG synthesis
  - B) Induces cellular as well as humoral immunity
  - C) Induces secretion of protective mucosal neutralizing antobodies
  - D) Is safer to give to immunosuppressed children
- **35.** What accounts for antibody switching (i.e. the switch of one B-cell from producing one class of antibody to another antibody class that is responsive to the same antigen)?
  - A) Mutation in the genes of that B-cell, induced by exposure to the antigen
  - B) The rearrangement of V region genes in that clone of responsive B-cells
  - C) A switch in the kind of antigen-presenting cell that is involved in the immune response
  - D) The shuffling of exons for one C region type to another attached to the V-J transcript
- **36.** Cholera is an infectious disease caused by the bacterium *Vibrio cholera*. How does the cholera toxin (CTX) dysregulate the G-protein coupled receptor signaling in the host cells?
  - A) CTX modifies the Gsα-subunit which is unable to hydrolyze the bound GTP resulting in increased cAMP level
  - B) CTX modifies the Gsα-subunit which is unable to hydrolyze the bound GTP resulting in decreased cAMP level
  - C) CTX modifies the  $Gi\alpha$ -subunit which is unable to hydrolyze the bound GTP resulting in increased cAMP level
  - D) CTX modifies the  $Gi\alpha$ -subunit which is unable to exchange GDP resulting in increased cAMP level
- **37.** Assuming that the level of glucose is low, a mutation in the repressor associated with the *lac* operon of *E. coli* which prevents binding of the repressor to allolactose should result in
  - A) Constitutive expression of the lac operon genes
  - B) Lack of expression or reduced expression of the lac operon genes under all circumstances
  - C) Expression of the genes only when lactose is present
  - D) Expression of the genes only when lactose is absent

	<b>8.</b> A bacterial culture was diluted 1000 fold and 0.1 ml of this diluted sample was spread per plate on nutrient agar. In a triplicate run, the number of colonies formed is 121, 93 and 86. The number of colony forming units/ ml in the original bacterial culture is					
	A) $10^6$ B) $10^5$	C) $10^3$	D) $10^2$			
39.	Which of the following state protein is correct?	ments about the Rb (retino	blastoma) tumor suppressor			
	A) Rb is activated when phosph	orylated by Cdk				
	B) Rb binds the transcription fa	actor E2F and thus prevents the	he cell from entering S-phase			
	until a mitogenic signal is re	ceived				
	C) Rb is a transcription factor					
	D) A mitogenic signal is rec	eived, Rb binds the transcr	ription factor E2F and thus			
	stimulates the cell to enter S	S-phase				

- **40.** In which of the following situations would cells die by necrosis, not apoptosis?
  - A) Removal of cells with damaged DNA that cannot be repaired
  - B) Removal of developing neurons that fail to make profitable connections with other cells
  - C) Removal of heart muscle cells damaged by oxygen depletion following cardiac infarction
  - D) Removal of virus infected cells
- **41.** Which of the following statement about ribozymes is false?
  - A) Ribozymes are capable of self-replication but cannot catalyze other types of reactions
  - B) Manfred Eigen found that RNAs could replicate themselves in solution without the aid of proteins
  - C) In *Tetrahymena thermophila*, an intron was found that carried out its own excision and splicing
  - D) A tRNA-processing enzyme containing RNA was found in which the RNA portion provided the catalysis
- **42.** An example of competitive inhibition of enzyme is the inhibition of
  - A) Succinic dehydrogenase by malonate
  - B) Cytochrome oxidase by cyanide
  - C) Hexokinase by glucose-6-phosphate
  - D) Carbonic anhydrase by carbon dioxide
- **43.** A set of microfuge tubes containing DNA, RNA and protein samples have lost their labels. Which of the following strategies will you adopt to distinguish and relabel them?

- A) Measuring their absorption at 260 nm and 280 nm B) Measuring their absorption at 240 nm, 260 nm and 280 nm C) Measuring their absorption at 260 nm and 280 nm at 30°C and 80°C D) Measuring their absorption at 240 nm, 260 nm and 280 nm at 30°C and 80°C **44.** When hemoglobin is converted from the deoxy form to oxyhemoglobin? A) It becomes more acidic and releases protons B) Carbamino formation is promoted C) Binding of BPG is favored D) Bound NO is transferred to glutathione **45.** Which of the following virus is not used in gene therapy? B) Retrovirus A) Papillomavirus C) Adenovirus D) Herpes simplex virus **46.** What is an MPR rating on air filters? A) Magnitude performance rating B) Micro-particle performance rating C) Macro-particle performance rating D) Moles per rate **47.** What do you mean by the low Ks value? A) Low affinity for the limiting substrate B) Medium affinity for the limiting substrate C) High affinity for the limiting substrate D) No affinity for the limiting substrate **48.** What do you mean by "Idiophase"? A) Production of waste materials B) Production of topical products C) Production of primary metabolites D) Production of secondary metabolites
- **49.** Which of the following condition is of reverse phase chromatography?
  - A) The mobile phase is non-polar and stationary phase is polar
  - B) The mobile phase is polar and stationary phase is non-polar
  - C) Both the mobile phase and stationary phase are organic
  - D) Both the mobile phase and stationary phase are inorganic
- **50.** What is the function of microcarrier beads?
  - A) To give the cells the shape of beads
- B) It provides non-buoyancy condition
- C) It helps in the lysis of cells
- D) It provides protection and surface area

## Microbiology (1068)

1.	Who demonstrated that open tubes of broth remained free of bacteria when air was free of dust					
	A)	Francesco Redi	B)	Louis	Pasteur	
	C)	John Tyndall		D)	Lazzaro Spallanzani	
2.	The te	erm bacteriophage was coined by				
	A)	De'Herelle		B)	F.W. Twort	
	C)	Beijernick		D)	D. Iwanosky	
3.	Several flagella at one end of the organ is called as					
	A)	Monotrichate		B)	Amphitrichate	
	C)	Lophotrichate		D)	Peritrichate	
4.	The interval period between HIV infection and appearance of antibodies in serum is called					
	A)	Intrinsic period	B)	Incuba	ation period	
	C)	Window period	D)	None	of these	
5.	The su	urgical asepsis was first demonstrated by				
	A)	Louis Pasteur		B)	Robert Koch	
	C)	Joseph Lister		D)	Edward Jenner	
6.	The famous experiment using goose neck flasks to disapprove the theory of spontaneous generation of microorganisms was demonstrated by					
	A)	Robert Koch		B)	John Needham	
	C)	H. Schroeder		D)	Louis Pasteur	

7.	L-form bacteria were isolated by						
	A)	Emmy Klieneberger-Nobel	B)	Louis Pasteur			
	C)	Joseph Lister	D)	Robert Koch			
8.	The pi	gment present in red algae is					
	A)	Rhodochrome	B)	Fucoxanthin			
	C)	Chlorophyll only	D)	Chlorophyll + phycoerythrin			
9.	Rancid	ity of stored foods is due to the activity of	f				
	A)	Toxigenic microbes	B)	Proteolytic microbes			
	C)	Saccharolytic microbes	D)	Lipolytic microbes			
10.	Alginic	e acids and its salts are obtained from the v	wall of				
	A)	Red algae	B)	Brown algae			
	C)	Green algae	D)	Red and brown algae			
11.	Which	is the largest bacterium					
	A)	Thiomargarita namibiensis	B)	Bacillus licheniformis			
	C)	Mycoplasma genitalium D)	Bacter	oides thetaiotaomicron			
12.	Which	is the largest virus by size					
	A)	Mamavirus	B)	Mimivirus			
	C)	Megavirus chilensis	D)	Pithovirus sibericum			

For acetic acid production the methods followed are

13.

	A)	Orleans process		B)	Rapid process
	C)	Submerged process		D)	All of these
1.4	TD1				11. 1
14.	The p	process of enhancement of virulence of a	microor	ganism i	s called
	A)	Activation		B)	Hyper-activation
	C)	Exaltation		D)	Attenuation
15.	Whic	h of the following is absent in gm+ bacte	eria		
	A)	Cell wall		B)	Teichoic acid
	C)	Murein		D)	Outer membrane
16.	Whic	h of the following processes is not exhib	oited by	eukaryot	ic microorganisms
	A)	A) Decomposition		Ferme	entation
	C)	Nitrogen Fixation		D)	Causing disease
17.	The 1	transfer of plasmid from one bacterium to	o a diffe	rent strai	n/ species is called as
	A)	Horizontal gene transfer	B)	Vertic	cal gene transfer
	C)	Homozygous gene transfer		D)	Heterozygous gene trasfer
18.	The u	utilization of elemental carbon by microc	organism	ıs during	geochemical cycling is known as
	A)	Immobilization	B)	Mine	ralization
	C)	Decomposition	D)	Dissii	milation
19.	Which scientist first disproved spontaneous generation of microorganisms by boiling the meat infusions and using the hermetical sealing				
	A)	Francesco Redi	B)	Theod	dor Schwann
	C)	Louis Pasteur		D)	Lazzaro Spallanzani

20.	Which scientist disproved spontaneous generation of microorganisms by supplying the air to boiled meat infusion after passing through a coiled tube heated to a very high temperature					
	A)	Francesco Redi	B)	Lazza	aro Spallanzani	
	C)	Theodor Schwann		D)	Louis Pasteur	
21.	In an	aerobic respiration by microorganisms	the termin	al electr	on acceptor is	
	A)	Oxygen	B)	Hydro	ogen	
	C)	Nitrate		D)	Nitrogen	
22.	The acquisition of energy as a result of glucose fermentation requires					
	A)	Substrate level phosphorylation B		Elect	ron transport chain	
	C)	The enzyme glucose oxidase		D)	Oxidative phosphorylation	
23.	Which of the following groups of the microorganisms contain unique coenzymes such as coenzyme M and coenzyme F420					
	A)	Methanogens		B)	Methanotrophs	
	C)	Acetogens		D)	Sulphate reducing bacteria	
24.	When	n acetate is used as the sole source of ca	rbon for s	ome mic	croorganisms the pathway used is	
	A)	Glycolytic pathway		B)	Pentose phosphate pathway	
	C)	Glyoxalate pathway		D)	Oxaloacetate pathway	
25.	On which day the World Intellectual property Day is celebrated					
	A)	April 26		B)	May 22	
	C)	June 5		D)	December 1	
26.	Which	ch immunoglobulin class is the most IgG IgA	efficient	to prod B) D)	luce agglutination reaction?  IgM  IgE	

27.	Which of the Following is selective medium for <i>Streptococcus pyogenes</i> ?							
	A)	Blood agar	B)	Crystal Violet blood agar				
	C)	Potassium tellurite blood agar	D)	Chocolate agar				
28.	Drau	ghtsman colony is a characteristic feature of:						
	A)	Streptococcus pyogenes	B)	Streptococcus pneumoniae				
	C)	Enterococcus facecalis	D)	Viridans streptococci				
29.	Whic	th is the selective medium used for isolation of	f C. dip	ohtheriae?				
	A)	Tellurite blood agar	B)	Loeffler's serum slope				
	C)	Lowenstein-Jensen medium	D)	Chocolate agar				
30.	Whic	th of the following toxins is the most toxic?						
	A)	Botulinum toxin	B)	Tetanus toxin				
	C)	Diphtheria toxin	D)	Cholera toxin				
31.	Sere	ny test is used for the identification of:						
	A)	EPEC	B)	ETEC				
	C)	IEC	D)	EHEC				
32.		The most important specimen for isolation of <i>Salmonella typhi</i> in first week of enteric fever is:						
	A)	Blood	B)	Faeces				
	C)	Urine	D)	Pus				
33.	Acce	Accessory growth factor/s required by <i>Haemophilus influenzae</i> is/are:						
	A)	X factor	B)	V factor				
	C)	Both X and V factors	D)	Neither X nor V factor				
34.	Culture of <i>Mycobacterium tuberculosis</i> may be positive even if number of bacteria in the specimen is:							
	A)	As few as 1-2 per ml	B)	As few as 6-10 per ml				
	C)	As few as 10-100 per ml	D)	As few as 3-5 per ml				
35.	Extensively drug resistant tuberculosis (XDR-TB) due to <i>Mycobacterium tuberculosis</i> strains are resistant to all the following except							
	A)	Any fluoroquinolone	B)	Isoniazid and rifampicin				
	C)	At least one of three injectable second line	D)	Beta-lactams				
	-,	(capreomycin,kanamycin and amikacin)	- /					
36.	The f	Collowing characteristics are true for viruses ex	cept:					
	A)	Obligate intracellular infective agents	B)	Contain either DNA or RNA				
	C)	Do not multiply by binary fission	D)	Both DNA and RNA				
37.	Whic	th of the following is a diploid cell line?						
	A)	Hela	B)	WI-38				

	C)	McCoy	D)	BHK-2	1		
38.		ch of the following processes, bacteriophagum to another?	ge may a	act as ca	rrier o	f genes from one	
	A)	Transformation	B)	Transdi	action		
	C)	Conjugation	D)	Transpo	osition		
39.	On wh	ich day, the WHO announced the global era	dication	of small	pox?		
	A)	May 8, 1970	B)	May 8,	1975		
	C)	May 8, 1980	D)	May 8,	1985		
40.	Which	vaccine is employed in pulse polio immunis	sation pr	ogramm	e?		
	A)	Salk vaccine	B)	Sabin v	accine		
	C)	BCG	D)	Variola	vaccin	ne	
41.		of the following drugs may be given for aza virus A?	chemo	prophyla	ixis du	ring epidemic of	
	A)	Amantadine	B)	Acyclo	vir		
	C)	Ribavirin	D)	Gancic	lovir		
42.	The transgenic crops rich in vitamin A are:						
	A)	Golden rice	B)	Pink ric	e		
	C)	Yellow rice	D)	Orange	rice		
43.	All of the following antirabies vaccine are inactivated vaccines except:						
	A)	Human diploid cell strain vaccine	B)	Purified culture		ck embryo cell ne	
	C)	Purified vero cell vaccine	D)	Chick e	embryo	vaccine	
44. virus?	Which	of the following markers when positive	indicate	high in	ıfectivi	ty of hepatitis B	
	A)	HBsAg	B)	HBeAg	,		
	C)	HBcAg	D)	HBAg			
45.	The following may cause teratogenic infections except?						
	A)	Toxoplasma	B)	Cytome	egalovi	rus	
	C)	Rubella virus	D)	Trypan	osoma		
46.	Lepror	nin test is an example of:					
	A)	Type I hypersensitivity reaction	B)	Type	II	hypersensitivity	
reactio		Trung III hamananaitivitas nagatian	D)	Т	13.7	h	
reactio	C) n	Type III hypersensitivity reaction	D)	Type	IV	hypersensitivity	
47.	DTH r	eaction may be demonstrated in the following	io excen	ť			
.,.	A)	Tuberculosis	B)	Salmon	ellosis		
	<i>)</i>		-,	~ ~ ~ 11101			

	<b>C</b> )	Gas gangrene	D)	Contact dermatitis
48.	During	PAGE gel formation, acrylamide is activated	d by fre	e radicals formed by
	A)	Ammonium persulphate	B)	TEMED
	C)	Oxygen	D)	SDS
49.	The dif	fference between a simple tandem array and a	a compo	ound tandem array is:
	A)	The frequency of different sequences	B)	The direction of sequences face (left or right)
	C)	The number of different sequences involved	D)	The number of repetitions of sequences
50.	Protein	secondary structures such as a-helices and E	3-sheets	are stabilized mainly by:
	A)	Dipole moment	B)	Disulfide bond formation
	C)	Vander Waals force	D)	Hydrogen bond formation

## Nuclear Medicine (1068)

1.	when the nan me m	reases				
	A) Decay constant re	emains unchanged				
	B) Decay constant in	ncreases				
	C) Decay constant de	ecreases				
	D) Decay constant cl	nanges				
2.	<ul> <li>A Cyclotron is used to</li> <li>A) cause heavy nuclei to fission spontaneously</li> <li>B) cause isomeric transitions exclusively</li> <li>C) cause charged particles to collide into a target material</li> <li>D) cause heavy nuclei to fission spontaneously</li> </ul>					
3	What is the mass equ	ivalent of 70keV phe	oton?			
<i>J</i> .	A) $1.25 \times 10^{-31} \text{ Kg}$	ivalent of 70ke v pin				
	C) $1.25 \times 10^{-27} \text{ Kg}$		D) 11.2 x 10 Kg D) 11.2 x 10 <sup>-31</sup> Kg			
	C) 1.23 x 10 Kg		D) 11.2 x 10 Kg			
4.	Which of the following	ng is not a processin	g artifact in the reporti	ing film?		
	A) Dirty rollers		B) Roller marks			
	C) Kink marks		D) Chemical fog			
5.	What is the dynamic	range of the nuclear	medicine digital imag	ing system?		
	A) 2 <sup>8</sup>	B) $2^{10}$	$C) 2^{12}$	D) 2 <sup>14</sup>		
6.	During which phase i	radiation induced ch	romosome damage is a	analyzed		
	A) Prophase	B) Metaphase	C) Anaphase	D) Telophase		
7.	LET and RBE of 1M	eV beta particles is				
	A) 0.3 and 0.9	B) 3.0 and 1.0	C) 30 and 10	D) 300 and 20		
8.	Which of the following A) Single hit chromos B) Multihit chromos C) Reciprocal transle D) Thrombocytopens	osome aberration ome aberration ocations	cytogenetic effect			
9.	What does a low D37	value indicates				
	A) Radio-resistance	cell	B) Radio-sensitive	cell		
	C) Highly radio-resis	stant cell	D) Highly radio-se	ensitive cell		
10.	Which factors will yo	ou least consider in c	alculating a shielding	barrier thickness?		
	-					

A) Workload		B) Corridor Distar	B) Corridor Distance			
C) Patient posit	ion	D) Controlled area	ı			
<b>11.</b> Which of the fol	llowing is present on the	label of a transport page	ckage.			
A) Name of the		B) Name of the co	_			
C) Name of the	· ·	D) Name of the ra	_			
<b>12.</b> Which number s	should be present on a po	isonous, flammable so	olid radioactive material.			
A) 4	B) 7	C) 6	D) Both 6 and 7			
13. Which is a mock	x standard?					
A) I-125	B) Co-57	C) Cs-137	D) I-129			
<b>14.</b> Random errors a	affects					
A) Accuracy	B) Variance	C) Precision	D) Reproducibility			
15. Which process s	solves the impurity proble	em in detectors.				
A) Pure sampling	ng process	B) Energy-selective	ve counting process			
C) Lithium dop		D) Thallium dopir	D) Thallium doping process			
<b>16.</b> TVT in lead (mi	n) of I-131					
A) 1.7	B) 3.1	C) 6.3	D) 7.7			
17. Townsend avala	nche process occurs in					
A) Charged par	ticle spectroscopy	B) Pocket dosimetry				
C) Survey mete	r	D) Mass spectrosc	D) Mass spectroscopy			
<b>18.</b> Baseline shift oc	ecurs in which electronic	instrument				
A) Resistor and	capacitor	B) Amplifier				
C) ADC		D) Coincidence ci	rcuit			
<b>19.</b> As per the guid minute?	delines, ALI is calculate	ed assuming how mu	ich of air is breathed per			
A) $1x 10^4 \text{ ml}$	B) $2 \times 10^4 \text{ ml}$	C) $3 \times 10^4 \text{ ml}$	D) $4 \times 10^4 \text{ ml}$			
<b>20.</b> How much sewe	er concentration is allower	ed for 99mTc.				
	B) 0.1 μCi/mL		D) 1.1 μCi/mL			
21. Sequential Steps	s to follow in dealing wit	h a radioactive spill				

	<ul><li>A) Contain, inform a</li><li>C) Closure, inform a</li></ul>		<ul><li>B) Inform, decontaminate and contain</li><li>D) Inform, contain and decontaminate</li></ul>			
22	<ul><li>Laboratory monitors</li><li>A) Regularly operate</li></ul>		B) Contamination m	onitors		
	C) Used to detect all		D) Placed at fixed lo			
23	. A positron is an antip	particle of				
	<ul><li>A) Ordinary proton</li><li>C) Negative electron</li></ul>		B) Ordinary electron D) Ordinary neutron			
C) Negative electron D) Ordinary fleutron						
24	<ul><li>Which process does r</li><li>A) Beta decay</li></ul>	not transform an "odd B) Positron decay	<ul><li>-odd" nucleus to "even</li><li>C) Alpha decay</li></ul>	n-even" nucleus. D) EC		
	A) Beta decay	b) Fosition decay	C) Aipila decay	D) EC		
25	. Pick the renal cortica	l agent?				
	A) DTPA	B) DMSA	C) EC	D) MAG3		
26	. Pseudolesions are res	ult of				
	A) Patient movemen	t	B) Respiration motion	B) Respiration motion		
	C) Mis-registered PE	ET to CT	D) Inaccurate SUV			
27	. Leiomyosarcomas do	esn't occur in				
	A) Pancreas	B) Bladder	C) Uterus	D) Prostate		
28	In MDCT the nume increasing pitches because		ns available for inter	polation decreases with		
	A) Z window filter is	decreasing	B) Z window filter is	B) Z window filter is increasing		
	C) Z window filter is	absent	D) Z window filter i	s fixed		
29	. Dose calibrator reading	ngs are not affected by	v			
	A) Volume of the do	٠.	B) Location of dose	in well		
	C) Radionuclide half	life	D) Shape of the dose container			
30	. In which condition th	e PHA window will n	not count the 140 keV	gamma photons		
	A) In increased HV s		•			
	B) In increased ampl	ifier gain				
		er HV or amplifier gai	_			
	D) In increased eithe	r HV or amplifier gain	n setting			
31	31. What could be the reason for the variation less than expected in a chi-square test					

performed on a scintillation counter?

	A) RF interference		B) Random electrical	l noise
	C) Temperature chan	ges	D) Drifting power su	pply
32		e reason for a cold spo	ot in the gamma image?	
	A) Coins/buckles		B) PMT failure	
	C) Cotton swab		D) Collimator damag	ge
33.	. If Rg represents collin	nator resolution, then	its large value means	
	A) Good resolution	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	B) Worse resolution	
	C) Better resolution		D) High resolution	
34	*	temporary crystal dar	nage in a gamma came	era
	A) Avoid temperature		B) Avoid hitting the	
	C) Avoid contaminat		,	•
	,	J	,	•
35	. Radiotracer used to m	neasure cerebral dynar	nics	
	A) 99mTc-DTPA	B) 99mTc-DMSA	C) 18F-FDG	D) 18F-Choline
36	During labeling of RI	BC's by 99mTc, the va	alency of the 99mTc sh	ould change to
	A) +7	B) +5	C) +1	D) -1
25	II 1 41:	CC 4 41 '		
37.	How does smoothing	•	D) I	·•
	A) Reduces noise in s	=	B) Increases imaging	
	C) Reduces pixel val	ues	D) Increases injecting	g dose
38.	. Angina pectoris is the	e pain cause by	and treated by	
	A) Myocardial infarc			•••
	B) Myocardial infarc	•		
	C) Myocardial ischer			
	D) Myocardial ischer		onists	
	, <b>,</b>		,	
39	. What does "track" me	eans on disk drive		
	A) Pie shaped centers	S	B) Discrete positions	<b>,</b>
	C) Data blocks		D) Concentric rings	
			_	
40	. Plummers disease is s	same as		
	A) TMG	B) GD	C) Toxic adenoma	D) Hyperthyroidism
<b>/</b> 11	In dual gastric scintic	ranhy which combine	tion of the radionuclide	as is prafarrad
71.	A) 99mTc and 201 T	- •	B) 99mTc and 67Ga	os is prototicu.
	<ul><li>A) 99mTc and 201 I</li><li>C) 99mTc and 131 I</li></ul>	1	D) 99mTc and 18F	
	$C_{j}$ 221111 Callu 1311		D) 7711116 allu 10F	

42.	Opiod drug morphine causes constriction of		
	A) Gall bladder	B) Spinter of oddi	
	C) Pancreatic duct	D) Common bile duct	
43.	During 14C-carbon breath tests, 1mmol of C	CO2 will be trapped by	
	A) 0.1 mmol of hyamine hydroxide	B) 0.5 mmol of hyam	ine hydroxide
	C) 1.0 mmol of hyamine hydroxide	D) 5.0 mmol of hyam	ine hydroxide
44.	Which statement is not true for perchlorate s	salt studies	
	A) It is rapidly absorbed and metabolized b	y the body	
	B) It is rapidly taken up by the thyroid glan	d	
	C) It is rapidly eliminated by the body in ur	ine	
	D) It is used to prevent technetium uptake i	n the body	
<b>45.</b>	What would be the transmission factor for	a weekly dose equiv	alent of 59.7 µSv and
	occupancy factor of 1, in a PET-CT room.		
	A) 59.7 B) 0.017	C) 0.34	D) 1.0
46.	Which of the following tests should be pe SPET system?	rformed to evaluate q	uantitative accuracy of
	A) Tomographic uniformity	B) Tomographic resol	ution
	C) Tomographic contrast	D) Tomographic line	
	c) Tomograpme contrast	b) romograppine inic	surrey
47.	What is the meaning of "historical waste"		
	A) Are raw or partially treated	B) Have incomplete to	·
	C) Mixed with waste stream	D) Have complete his	tory
48.	Two complementary approaches for the nan	o-particles are	
	A) Top and bottom approach	B) Top-up and bottom	n-up approach
	C) Top-down and bottom-down approach	D) Top-down and bot	tom-up approach
49.	Select the correct sequence of time needed be feed	by the radiopharmaceut	ical for stopping breast
	A) 67Ga-citrate>201TlCl>99mTc-TCo4>99	9mTc-MAA	
	B) 201TlCl>67Ga-citrate >99mTc-TCo4>9	9mTc-MAA	
	C) 67Ga-citrate>201TlCl>99mTc-MAA >9	9mTc-TCo4	
	D) 201TlCl >67Ga-citrate >99mTc-MAA >	99mTc-TCo4	
50.	Select the correct sequence of radiopharm	aceuticals providing h	ighest organ absorbed

A) MAA(lungs), HIDA(GB), MIBI(GB) B) MAA(lungs), MIBI(GB), HIDA(GB)

C) MIBI(GB), MAA(lungs), HIDA(GB) D) HIDA(GB), MIBI(GB), MAA(lungs)

*x-x-x* 

## Optometry (1068)

1.	Endoth	elial cell density is					
	A) 1000 cells/mm2 at birth						
	B) 2000-3000 cells/mm2 at birth						
	C)	3000-4000 cells /n	nm2 at birth				
	D)	6000-7000 cells/m	m2 at birth				
2	True of	oout cornea is					
4.		Refractive index is	: 1 376				
		Maximum refracti		ea –ague	eous interface		
		Central cornea is 3		_			
		Central corneal thi					
3	Cornea	il tonography can be	useful in detecti	ng which	h of these conditions?		
<i>J</i> .		Dry eye	userui iii deteeti	ing wine	if of these conditions.		
	-	Staphylococcal ma	arginal keratitis				
		Fuch's corneal dys	-				
		Megalocornea	1 7				
4.	Which	of the following sta	itements regardin	g acanth	emoeba is false?		
		_		-		e motile trphozoite and the	
	,	A) Two potentially infectious forms of acanthoameba exist: the motile trphozoite and the dormant cyst.					
	B)	Acanthamoeba car	n be grown on bu	ffered cl	narcoal yeast extract a	gar.	
	C)	Acanthamoeba car	n be visualized w	ith chalc	ofluor white, acridine	orange, or the giemsa stain.	
	D)	Acanthamoeba ker	ratitis can appear	as a pse	udodendriteinits cours	se.	
5.	Patient	s who complain of	f increased symp	otoms fi	rst thing in the mor	ning could have any of the	
		ing conditions excep			C	2	
	A)	Anterior basement	membrane dystr	ophy			
		Fuch's endothelial					
		C) Floppy lid syndrome					
	D)	Keratoconjunctivi	tissicca				
6.	All of	the following condi	tions commonly	cause gla	are except:		
	A)	Iritis			B) Corneal scarring	5	
	C)	Posterior subcapsu	ılar cataract		D) Albinism		
7.		risk factors for cata	ract formation ex	kcept –	D) G		
		Age		D) (	B) Genetic propensi	ty	
	<b>C</b> )	Type A personality	/	D) Smo	oking		
Q	Calliete	o eye for Toric IOL	is in ?				
υ.		Lenstar	B) I trace		C) IOL master	D) Verion	
	. <b>.</b> ,		2) 1 111100		5, 102 master	2) (011011	
9.		lirection of gaze is i				D) D' 1.	
	A) L	Jpgaze	B) Primary gaz	ze	C) Downgaze	D) Right gaze	

<b>10.</b> Fal	l nm					
	<ul><li>A) Involves Photodisruption</li><li>C) Pulse is in nanoseconds</li></ul>		B) Wavelength is 1043 D) Infrared laser	, 11111		
<b>11.</b> For	r a trifocal glasses, if the -1.00/-1.00X180 in the +0.50/-1.00X180 in the +1.50/-1.00X180 in the What is the near add?	distance portion intermediate portion				
	A) +1.50 D	B) +0.50 D	C) +2.00 D	D) +2.50 D		
<b>12.</b> All	the following pairs are A) Diopter-reciprocal r		bot: B) Prism diopter- centimeters per meter			
	C) Wavelength – nanor	meters	D) Frequency-cycles p	er degree		
<b>13.</b> Wl	<ul><li>13. When a lens material has a higher index of refraction, all of the following are true <i>except</i>:</li><li>A) The velocity of light is increased in this material</li></ul>					
	B) The spectacle lens n	nade from this material	can be thinner			
	C) Its value of <i>n</i> is high	ner				
	D) It has a greater abili	ty to refract light				
<b>14.</b> Th	e Airy disk image on the A) The wavelength of	•				
	B) The focal length of t	the eye is shorter				
	C) The pupil size decre	ases				
	D) Macular degeneration	on is present				
	<u>-</u>	-				
<b>15.</b> Co	15. Corneal haze secondary to corneal edema is primarily caused by A) Reflection B) Light scattering C) Refraction D) Diffraction					
<b>16.</b> <i>Ca</i>	ndela is a unit of measur A) Luminous intensity		wing? minous flux			
	C) Illuminance	D) Lu	ıminance			

<b>17.</b> The far point of the non-A) And the fovea are		• •			
B) Is posterior to the	eye, optically spe	eaking			
C) Is nearer to the ey	e than the point o	of focus of the fu	ally accommo	odated eye	
D) Cannot be moved	by placing a lens	in front of the	eye		
<b>18.</b> In which type of astigmatis A) Mixed astigmatis		lines straddle th	ne retina?		
B) Compound myop	ic astigmatism				
C) Compound hyper	opic astigmatism				
D) Simple myopic a	stigmatism				
<b>19.</b> 19 An angle of 45 degree A) 45	es corresponds to B) 22.5	how many prisr C) 90	_	o) 100	
20. You fit a toric soft contains centers well, but the when the lens is placed of A) -2.50 D - 1.50 x 1	e lens mark at the on the patient's eye	e 6 o'clock posi	tion appears contact lenssh	to rest at the4	l o'clock position
C) - 2.50 D - 1.50 x	55	D) -2.50 D -	1.00 x 175		
21. Compared with spectacle A) Increase the acco		rements of myop	oic eyes		
B) Increase the acco	mmodative requir	ements of hyper	ropic eyes		
C) Increase the conv	ergence demands	of hyperopic ey	/es		
D) Decrease the con	vergence requiren	nents of myopic	eyes		
22. The power of an in traoc A) As the power of t				ases	

B) As the power of the cornea decreases and the axial length increases

	C) As the power of the cornea increases and the axial length decreases					
	D) As the power of the cornea decreases and the axial length decreases					
23.	A) Placing the optical center of the segment as close as possible to the top of the segment B) Placing the top of the segment as close as possible to the distance optical center C) Using a smaller bifocal segment D) Using a blended bifocal segment having no visible line of separation					
24.	I. The interface at the surface of the cornea is responsible for approximately what percentage of the refractive power of the human eye?  A) 25%  B) 33%  C) 50%  D) 66%					
25.	ŕ	uscles inserts closest to the B) Medial rectus	,	D) Inferior rectus		
26.	Which of the following A) Lidocaine	g localregional anesthetic a B) Procaine	agents has the longest dur C) Bupivacaine D) M			
27.	Factors that influence A) Concentration	drug penetration of the cor B) Drop volume	rnea include all of the folloop pH	owing except:  D) Vehicle		
28.		g series correctly depicts thatropine>scopolamine>cyc		g action?		
	B) Atropine>scope	oiamine>homatropine>cyd	lopentolate>tropicamide			
	C) Cyclopentolate	>tropicamide>scopolamine	e>homatropine>atropine			
	D) Homatropine>0	eyclopentolate>tropicamid	e>scopolamine>atropine			
29.	<ul> <li>9. Which of the following best characterizes a person with "low vision"?</li> <li>A) A bitemporal hemianopia</li> <li>B) Best-corrected visual acuity of 20/70 or worse</li> <li>C) Myopia greater than - 20 D</li> <li>D) A disability related to visual dysfunction</li> </ul>					
30.	A) Testing chart w B) Non-standardiz	acuity testing for a low visith an equal number of syned room illumination al acuity chart at 20 ft of 10 ft	•	f the following except:		

31.	<b>31.</b> The color of fluorescein staining in corneal ulcer is:						
	A) Yellow	B) Blue	C) Green	D) Royal blue			
32.	Schirmer's test is used for	or diagnosing:					
	A) Dry eye	B) Infective keratitis	C) Watering eyes	D) Horner's syndrome			
33.	All the following are extra	raocular muscle of eye	except:				
	A) Superior rectus	B) Ciliary muscle	C) Inferior oblique	D) Superior oblique			
34.	In concomitant squint:						
	A) Primary deviation	> Secondary deviation	1				
		< Secondary deviation					
	,	= Secondary deviation					
		ndary deviation are var					
	_ / <b>y</b>						
35.	In paralytic squint, the di	fference between prim	ary and secondary dev	viation in the gaze of			
	direction of the paralytic	<u>-</u>	ary and secondary de	ration in the gaze of			
	A) Increases	muscic.	B) Decreases				
	C) Remains the same		D) Depends on the n	nuscle involved			
	c) Remains the same		D) Depends on the h	idsele involved			
36	Dense scar of cornea wit	th incarceration of iris	ic known ac:				
50.	A) Adherent Leucom		B) Dense leucoma				
	,						
	C) Ciliary staphylom	a	D) Iris bombe				
27	Which one of the following	is the cas minarysad in	madam avaiman lagans	)			
37.	Which one of the following	_					
37.	Which one of the following A) CO2	g is the gas mixer used in B) N2O C) ArF					
	A) CO2	B) N2O C) ArF	D) Xe				
	A) CO2  A polarizing ophthalmic let	B) N2O C) ArF	D) Xe as to eliminate:	PF			
	<ul><li>A) CO2</li><li>A polarizing ophthalmic let</li><li>A) A vertical vibratin</li></ul>	B) N2O C) ArF  and should be oriented so a g wave	as to eliminate:  B) Horizontal vibratin	PF			
	A) CO2  A polarizing ophthalmic let	B) N2O C) ArF  and should be oriented so a g wave	D) Xe as to eliminate:	PF			
38.	<ul><li>A) CO2</li><li>A polarizing ophthalmic len</li><li>A) A vertical vibratin</li><li>C) Oblique vibrating v</li></ul>	B) N2O C) ArF  and the should be oriented so a  g wave  wave	as to eliminate:  B) Horizontal vibratin D) All vibrating wave	g wave

- In the N dimensional space, the number of different components in a skew-symmetric tensor  $A^{ij}$  of second-order are
  - (A)  $\frac{1}{2}(N^2 + N)$ (B)  $\frac{1}{2}(N^2 N)$

  - (D)  $(N^2 N)$
- The value of  $\int_0^\infty \frac{\sin t}{t} dt$  is 2.

  - (A)  $\frac{\pi}{4}$ (B)  $\frac{\pi}{2}$ (C) Zero

  - (D)  $\pi$
- If  $\phi = x^3 + y^3 + z^3 3xyz$ , then expression for Div (grad  $\phi$ ) is
  - (A) (x + y + 3yz)
  - (B) 3(x + y + xz)
  - (C) 3(x + y + z)
  - (D) 6(x + y + z)
- At the transition temperature in a first order phase transition, the specific heat of the system
  - (A) Diverges and its entropy has finite discontinuity
  - (B) Remains unchanged and its entropy exhibits finite discontinuity
  - (C) Has finite discontinuity and its entropy diverges
  - (D) Diverges and its entropy remains the same
- A particle moves along the curve  $x = 2t^2$ ;  $y = t^2 4t$ , z = 3t 5; where t is time. The component of its acceleration at time t=1 in the direction of  $(\hat{i} - 3\hat{j} + 2\hat{k})$  is
  - (A)
  - (B)
- Fourier transform of  $e^{-x^2/2}$  is
  - (A)  $log_e(k^2)$ (B)  $e^{-2k^2}$

(C) 
$$e^{-k^2/2}$$

(D) 
$$e^{-k^2}$$

7. Compton shift in wavelength of a photon scattered at angle,  $\theta$ , from the electron (mass m) is given by

(A) 
$$\frac{h}{mc^2}(1+\cos\theta)$$

(B) 
$$\frac{h}{mc}(1+\cos\theta)$$

(C) 
$$\frac{h}{mc}(1-\cos\theta)$$

(D) 
$$\frac{h}{mc^2}(1-\cos\theta)$$

8. The capacitance of two concentric spherical metal shells with radii a and b is

(A) 
$$4\pi\varepsilon_o \frac{ab}{(a+b)}$$

(B) 
$$4\pi\varepsilon_{o}\frac{ab}{(b-a)}$$
  
(C)  $8\pi\varepsilon_{o}\frac{ab}{(b-a)}$ 

(C) 
$$8\pi\varepsilon_o \frac{ab}{(b-a)}$$

(D) 
$$8\pi\varepsilon_o \frac{ab}{(a+b)}$$

9. The electrostatic energy of a uniformly charged spherical shell of total charge q and radius R is

(A) 
$$\frac{1}{4\pi\varepsilon_{o}} \frac{q^{2}}{R}$$
(B) 
$$\frac{1}{4\pi\varepsilon_{o}} \frac{q}{R}$$
(C) 
$$\frac{1}{4\pi\varepsilon_{o}} \frac{q^{2}}{R^{2}}$$
(D) 
$$\frac{1}{8\pi\varepsilon_{o}} \frac{q^{2}}{R}$$

(B) 
$$\frac{1}{4\pi\varepsilon_o} \frac{q}{R}$$

(C) 
$$\frac{1}{4\pi\varepsilon_o} \frac{q^2}{R^2}$$

(D) 
$$\frac{1}{8\pi\varepsilon_0} \frac{q^2}{R}$$

Transition temperature T<sub>c</sub> and critical field H<sub>c</sub> for a superconductor are related as

(A) 
$$H_c = H_o \left[ 1 + \left( \frac{T}{T_c} \right)^2 \right]$$

(B) 
$$H_c = H_o \left[ 1 - \left( \frac{T}{T_c} \right)^2 \right]$$

(C) 
$$H_c = H_o \left[ 1 - \left( \frac{T}{T_c} \right)^3 \right]$$

(C) 
$$H_c = H_o \left[ 1 - \left( \frac{T}{T_c} \right)^3 \right]$$
(D) 
$$H_c = H_o \left[ 1 - \frac{T^2}{T_c} \right]$$

- The eigenvalues of  $\begin{bmatrix} 2 & 4 \\ 3 & 3 \end{bmatrix}$  are
  - (A) -1, 6
  - (B) 1, 6
  - (C) 2, 8
  - (D) 3, 4
- The Fourier series expansion of function  $f(x) = \frac{\pi^2}{24} \frac{x^2}{8}$  in the interval  $(-\pi, \pi)$ .

  (A)  $\frac{1}{2} \left[ \sin x \frac{\sin 2x}{2^2} + \frac{\sin 3x}{3^2} \cdots \right]$ (B)  $\frac{1}{2} \left[ \cos x \frac{\cos 2x}{2^2} + \frac{\cos 3x}{3^2} \cdots \right]$ (C)  $\frac{1}{2} \left[ 1 + \sin x \frac{\sin 2x}{2^2} + \frac{\sin 3x}{3^2} \cdots \right]$ (D)  $\sum_{n=1}^{\infty} 1 + \frac{(-1)^{n+1}}{2n^2} \cos nx$

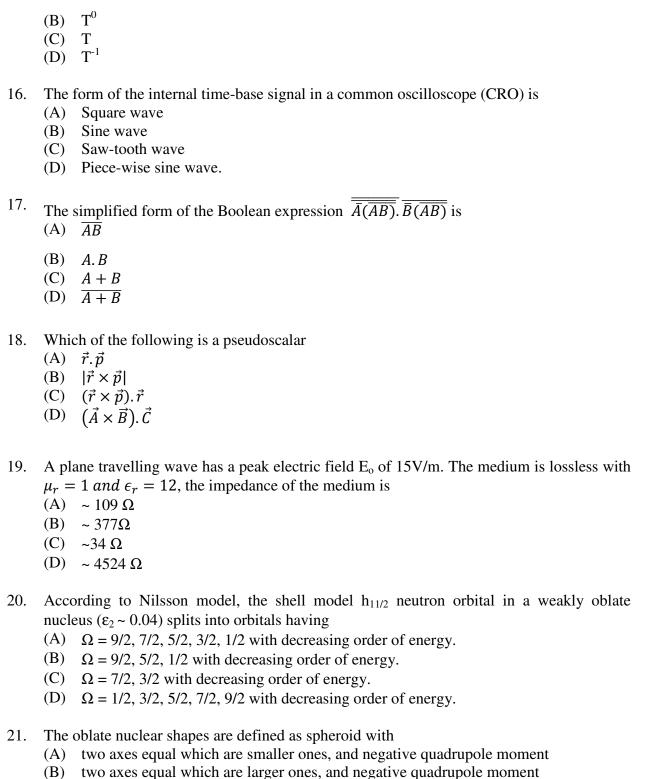

(A) 
$$\frac{1}{2} \left[ \sin x - \frac{\sin 2x}{2^2} + \frac{\sin 3x}{3^2} - \dots \right]$$

(B) 
$$\frac{1}{2} \left[ \cos x - \frac{\cos 2x}{2^2} + \frac{\cos 3x}{3^2} - \cdots \right]$$

(C) 
$$\frac{1}{2} \left[ 1 + \sin x - \frac{\sin 2x}{2^2} + \frac{\sin 3x}{3^2} - \cdots \right]$$

(D) 
$$\sum_{n=1}^{\infty} 1 + \frac{(-1)^{n+1}}{2n^2} \cos nx$$

- The ratio of electrical conductivity  $\sigma$  to thermal conductivity  $\kappa$  is proportional to temperature T. According to Wiedemann – Franz law, the ratio σ/ κT
  - (A) Is a constant called the Landau ratio
  - Varies from metal to metal. (B)
  - Changes slowly with temperature and is called Debye constant.
  - (D) Is the same for all metals, and is called the Lorentz number.
- An electron in classical electrodynamics is best described as
  - (A) A point charge particle.
  - A particle with a radius comparable to its Compton wavelength.
  - (C) A particle of radius e<sup>2</sup>/mc<sup>2</sup>
  - (D) A wave.
- The paramagnetic susceptibility of a solid varies with temperature (t) as 15.
  - (A)  $T^2$

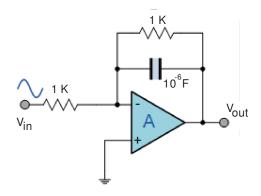

(C) two axes equal which are smaller ones, and positive quadrupole moment
(D) two axes equal which are larger ones, and positive quadrupole moment

The spin magnetic moment of neutron and its spin angular momentum are

(A) at right angles to each other

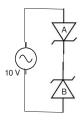

- cannot be defined as spin magnetic moment of neutron is zero (B)
- (C) opposite to each other
- (D) in same direction
- Shell model predicated spin-parity of <sub>16</sub>S<sup>33</sup> nucleus is
  - (A)  $5/2^+$
  - (B)  $3/2^+$
  - (C)  $3/2^{-}$
  - (D)  $1/2^+$
- The Lagrangian of a particle moving in one dimension is given by  $L = \frac{\dot{x}^2}{2x} V(x)$ . V(x) is 24. static one. The Hamiltonian is given by
  - (A)  $\frac{1}{2}xp + V(x)$

  - (B) xp + V(x)(C)  $\frac{1}{2}xp^2 + V(x)$ (D)  $\frac{1}{2}x^2p + V(x)$
- The potential of a diatomic molecule as a function of the distance r between the atoms is 25. given by  $V(r) = -\frac{a}{r^6} + \frac{b}{r^{12}}$ . The values of the equilibrium separation and the potential at equilibrium separation between the atoms, respectively, are
  - (A)  $\left(\frac{2b}{a}\right)^{1/2}$ ;  $\frac{-a^2}{4b}$
  - $\left(\frac{2b}{a}\right)^{1/6}$ ;  $\frac{-a^2}{4b}$ (B)
  - (C)  $\left(\frac{2b}{a}\right)^{1/6}$ ;  $\frac{-a^2}{b}$
  - $\left(\frac{2b}{a}\right)^{1/6}$ ;  $\frac{-a}{4b}$ (D)
- 26. Given  $u(x,y) = x + \frac{1}{2}(x^2 y^2)$  is the real part of an analytical function f(z) of complex variable z = x + iy, then imaginary part of f(z) will be
  - (A) x(y+1)
  - (B) y(x + 1)
  - (C)  $y(x^2 + 1)$
  - (D)  $y^2(x+1)$
- If the input to the following circuit is sinusoidal signal of amplitude 5 V and frequency Hz ,  $(1000/2\pi)$ then amplitude of the output in volts will

- (A)  $5\sqrt{2}$
- (B)
- (C)
- (D) 5

Two zener diodes, A and B, are connected to a 10 V a.c power supply. Diode A is has Zener voltage (Vz) = 3 V and Diode B has Vz = 5 V. The cut-in voltage ( $V\gamma$ ) for diodes A is 0.7 V and that for diode B is 0.3 V. The peak-to-peak voltage across the zener diode combination will be

- (A) +5.3 V and -3.7 V
- -5.7 V and +3.3 V
- (C) +5.7 V and -3.3 V
- (D) -5.3 V and +3.7 V
- Asymmetry energy correction in liquid-drop model formula for nuclear binding energy is

  - Negative and proportional to  $\frac{(A-2Z)^2}{A}$ Positive and proportional to  $\frac{(A-2Z)^2}{A}$

- (C) Negative and proportional to  $\frac{(A+Z)^2}{A}$ (D) Negative and proportional to  $\frac{(A-Z)^2}{A}$
- The energy E<sub>n</sub> of 'n' level of an atom consisting of positron and electron that orbit each other will be given by (R is Rydberg constant for hydrogen atom)
  - (A)
  - (B)  $\frac{\overline{n^2}}{2R}$
  - (C)
  - (D)
- The commutator  $[x^2, p^2]$  is
  - (A)  $i\hbar(xp + px)$
  - (B)  $2i\hbar(xp + px)$
  - (C)  $2i\hbar(x+p)$
  - (D)  $4i\hbar xp$

- Which of the following is Lorentz invariant

  - which of the following  $\begin{array}{c|c}
    (A) & |\vec{E}.\vec{B}|^2 \\
    (B) & |\vec{E}|^2 |\vec{B}|^2 |\vec{E}|^2 \\
    (C) & |\vec{E}|^2 |\vec{B}|^2 \\
    (D) & |\vec{E}|^2 |\vec{B}|^2
    \end{array}$
- Consider a system having three energy levels with energies 0, 2 $\epsilon$  and 3 $\epsilon$ , with respective degeneracies of 2, 2 and 3. Four bosons of spin zero have to be accommodated in these levels such that the total energy of the system is 10ε. The number of ways it can be done is
  - (A) 12
  - 8 (B)
  - (C) 24
  - (D) 18
- 34. The possible values of the resultant angular momentum for two electrons; one with  $j_1 = \frac{3}{2}$

and other with  $j_2 = \frac{5}{2}$  are

- (A) 4, 3, 2, 1
- (B)  $4\hbar$ ,  $3\hbar$ ,  $2\hbar$ ,  $1\hbar$
- (C)  $\sqrt{20}\hbar$ ,  $\sqrt{12}\hbar$ ,  $\sqrt{6}\hbar$ ,  $\sqrt{2}\hbar$
- (D) 1, 4
- The atom with configuration (ns) (n'p); n and n' represent principal quantum numbers, sand p are subshells. The possible ground state terms for (ns)(n'p) configuration are
  - (A)  ${}^{1}S_{0}, {}^{1}P_{1}, {}^{3}P_{1}, {}^{3}P_{2}$ (B)  ${}^{3}S_{1}, {}^{1}P_{1}, {}^{3}P_{1}, {}^{3}P_{2}$ (C)  ${}^{3}P_{0}, {}^{3}P_{1}, {}^{3}P_{2}, {}^{1}P_{1}$ (D)  ${}^{3}P_{0}, {}^{3}P_{1}, {}^{3}P_{2}, {}^{1}D_{2}$
- Consider a system of 3 Fermions which can occupy 4 available energy states with equal probability. The entropy of the system is
  - (A)  $k_B Ln 8$
  - (B)  $k_B Ln 12$
  - (C)  $2k_B Ln 2$
  - (D)  $k_B Ln 16$
- For two electron system, possible electronic state is  ${}^{3}P_{2}$ . Angle between  $\vec{S}$  and  $\vec{L}$  in this state is
  - $(A) \quad 0^{\circ}$
  - (B)  $60^{\circ}$
  - (C)  $30^{\circ}$
  - (D)  $90^{\circ}$
- 38. Lande's g factor and total magnetic moment for  ${}^{2}P_{3/2}$  state are

  - Lande's gractor and total magnet (A)  $g_j = \frac{2}{3}$ ;  $\mu_j = -\frac{2}{3}\sqrt{15} \mu_B$ (B)  $g_j = \frac{4}{3}$ ;  $\mu_j = -\frac{2}{3}\sqrt{15} \mu_B$ (C)  $g_j = \frac{4}{3}$ ;  $\mu_j = -\sqrt{15} \mu_B$ (D)  $g_j = \frac{1}{3}$ ;  $\mu_j = \sqrt{15} \mu_B$
- The  $\Lambda$  value of  ${}^{3}\Sigma_{u}^{\dagger}$  state is 39.
  - $(A) \quad 0$
  - (B) 3
  - (C) -1
  - (D) +1
- 40. One can study rotational structure of O<sub>2</sub> molecule using

	<ul> <li>(A) Infrared spectroscopy</li> <li>(B) Raman spectroscopy</li> <li>(C) Visible absorption spectroscopy</li> <li>(D) Microwave absorption spectroscopy</li> </ul>
41.	Total degeneracy of n=3 state of H atoms is (A) 9 (B) 3 (C) 14 (D) 18
42.	The field carriers in the weak interactions that are responsible for ordinary beta decays (A) $W^{\pm}$ bosons (B) Gluons (C) $Z^{0}$ boson (D) electrons
43.	<ul> <li>The field carriers in the strong interactions between quarks are</li> <li>(A) Gluons, which are massless and travel with speed of light</li> <li>(B) Z<sup>0</sup> bosons, which a have 97 times mass of proton</li> <li>(C) W<sup>±</sup> bosons, which have 85 times mass of proton</li> <li>(D) Gluons, which are have 85 times mass of Au nucleus</li> </ul>
44.	Maximum, energy that can be transferred from a charged particle of mass $m$ with kinetic energy $E$ to an electron of mass $m_o$ in a single collision is (A) $Em_o/m$ (B) $4Em_o/m$ (C) $2Em_o/m$ (D) $8Em_o/m$
45.	A 12 bit ADC is used to convert analog voltage of 0 to 10 V into digital. The resolution is (A) $24.4 \text{ mV}$ (B) $24.4 \mu\text{V}$ (C) $2.44 \text{ mV}$ (D) $1.22 \text{ mV}$
46.	In GM counter experiment, the measured data is 4900, the statistical error quoted with 68 % confidence level will be will be (A) 50 (B) 70 (C) 140 (D) 210
47.	The vacuum of the order of 10 <sup>-6</sup> torr can be produced and measured using

- (A) rotary pump and pirani gauge, respectively.
- (B) diffusion pump and pirani gauge, respectively.
- (C) adsorption pump and thermocouple gauge, respective
- (D) diffusion pump and penning gauge, respectively.
- 48. Phonons propagate in a solid with
  - (A) Velocity of light
  - (B) Velocity of sound
  - (C) Root mean square velocity of the atoms in the solid
  - (D) Fermi velocity
- 49. In a degenerate n type semiconductor material, the Fermi level is
  - (A) very near valence band
  - (B) at the centre in between valence and conduction bands
  - (C) in conduction band
  - (D) In valence band
- 50. The maximum proportion of volume available in face-centered cubic lattice of spheres is
  - (A) 52%
  - (B) 26%
  - (C) 32%
  - (D) 68%

## Statistics (1068)

1.	the upper faces of both is either a  A) 1/3  B) ¼		-	ne numbers on
2.	Let $A_1,, A_n$ be n events in the san A) $P(A_1 \cap A_n) \ge 1 - \sum_{i=1}^n P(A_i)$			,n. Then
	C) $P(\overline{A_1} \cap_{\dots} \cap \overline{A_n}) \ge 1 - \sum_{i=1}^n P(A_i)$	$A_i$ ) D) $P(\overline{A_1} \cap \cap \overline{A_n})$	$) \le 1 - \sum_{i=1}^{n} P(A_i)$	
3.	Graphic method to check the nor graph of:	mality assumption of er	ror in a linear model	is to draw the
	A) Residuals versus predicted value	es B) Residuals versu	s observed values	
	C) Q-Q plot of predicted values	D) Q-Q plo	ot of residuals	
4.	Let $\hat{\beta}$ be the estimate of $\beta$ in the with rank k and n>k. Then the distribution A) F(n, n-k)			( is a nxk matrix
	C) Chi-square with k df	D) F(n-k, n)		
5.	Let $Y = (Y_1,, Y_n)$ , where $Y_i$ s are if the distribution of $Y^tAY$ is chi squared A) $ A  \neq 0$ B) $ A  \neq 0$			or the matrix A,
6.	The set of all feasible solutions to a A) Concave set B) Convex		oblem forms a : D) Optimal set	
7.	The value of k for which the function zero otherwise is the joint probabt A) 2 B) ½			< <y, 0<y<1}="" and<="" th=""></y,>
8.	The characteristic function of a disis:	crete random variable X	is (.25+ .75 e <sup>t</sup> ) <sup>4</sup> . The	value of P[X≥1]
	A) .0468 B) .0156	C) .9532	D) .9844	
9.	Let the square matrix A be partition A) $ A_{11}   A_{11} - A_{12}A_{22}^{-1} A_{21} $	oned as A=[ $egin{array}{cccc} A_{11} & A_{12} \ A_{21} & A_{22} \ \end{array} ]$ . B) $ A_{22}   A_{11} - A_{12}A_{12}  $		

	C) $ A_{22}   A_{22} - A_{12}A_{11}^{-1}$	A <sub>21</sub>	D)  A <sub>2</sub>	<sub>22</sub>   A <sub>11</sub> -	$A_{21}A_{22}^{-1} A_{12}$	
10.	The test statistic obtain vector of a multivariate A) Mahalanobis D <sup>2</sup>			n the bas		ypothetical value of mear sample of size N, is:
	C) F			D) Mul	tivariate t- distr	ibution
11.	Let the p-dimensionary = AX , where A is a qx A) $N_p(A\mu, ATA^t)$			). Then t		tribution N <sub>p</sub> ( μ, T). Le of Y is:
	C) $N_q(A\mu, T)$		D) No	η( Αμ <i>,</i> ΑΤΑ	A <sup>t</sup> )	
12.		, $X^{(2)}$ ) <sup>t</sup> and $\Sigma = [\frac{\Sigma}{\Sigma}$ - W $X^{(1)}$ are uncor	$\Sigma_{11}$ $\Sigma_{12}$ $\Sigma_{21}$ related	12] respect 22 d if W is e	ctively, where X	n N <sub>p</sub> ( $\mu$ , $\Sigma$ ). Let X and $\Sigma$ be ${}^{(1)}$ has first q components D) $\Sigma_{21}\Sigma_{22}^{-1}$
13.	A random variable X n (1-4x)/4. The value(s) o A) x<1	-	is a pr	obability	distribution is:	x)/4, (1-x)/4, (1+2x)/4 and D) ¼≤x≤0
14.	A random variable X is of P[ $ X-E(X)  \ge 3/2\sqrt{Vc}$ A) .44 B) .64	$\overline{ar(X)}$ is:				, $1+1/\sqrt{3}$ ]. The exact value
15.	variance $\sigma^2$ . Suppose to . Then the variance of t	the asymptotic di	stribut stribut	ion of $\overline{X}$ ion of a $\alpha$	is normal with r	. ,
	Here H´ (.) denotes th	ne derivative.				
16.	interval [a, b] be in the to the right b, will be:	e support of X . Fo	or any	tε[a, b]	, the pdf when	ndom variable X. Let the truncated to left at a and
	A) f(t)/[ F(b)-F(a)]	B) f(t)/[ 1- F(b)]		C) f(t)/	[1-F(a)] D) f(t)	)

17. Let random variable X follows binomial distribution with parameters n and p. Then the

distribution of random variable Y= n-X is:

	A) Geometric		B) Binomial with parameters n and p		
	C) Binomial with param	eters n and 1-p D) Poi	sson with parameter np.		
18.	Let $f(x,y)$ be the joint p $(X^2+Y^2)^{1/2}$ and $V=X$ . The A) xy	Jacobean of this transf	ormation is:	the random variables U =  D) $xy(x^2+y^2)^{-1/2}$	
19.	parameter $\mu$ and scale and $S = \sum_{i=1}^{n} (X_i - X_{(1)})^{n}$	parameter $\theta$ . The MLE)/n. An unbiased estima	is of $\mu$ and $\theta$ respective tor of $\theta$ is:	distribution with location by are $X_{(1)}$ = min $(X_1,, X_n)$	
	A) $X_{(1)}$ –S/n	B) X <sub>(1)</sub>	C) S	D) nS/(n-1)	
20.			ion f(x) = $1/(1+x^2)$ will be D) $(-1/\sqrt{3}, 1/\sqrt{3})$		
21.	25% of the values of a	data set are less than	30 and 25% are more t	han 60. The coefficient of	
	quartile deviation is:				
	A) 15	B) 30	C) 1/3	D) 1/15	
22.	Let random variable X bound on P[X>nα], usin A) 3/8		-	and p (0 <p<1). 2="" 3<="" an="" d)="" th="" upper=""></p<1).>	
23.			r testing the stochastic	dominance between two	
	distribution functions is A) Median test	5:	B) Mann-Whiteny U-to	est	
	•				
	C) Run test		D) Mood's test		
24.	has 2 units connected	in parallel and Part B h	as 3 units connected in	onnected in series. Part A parallel. All the five units that the system functions	
	A) 31/32	B) 11/32	C) 1/32 D) 21/324	14	
25.	with mean 0 and var	iance $\sigma^2$ . Let $X_1,,X_n$ the sample mean and	be n measurements o	ch is normally distributed in the radius. Let $\overline{x}$ and ctively. Then an unbiased	

A) 
$$\pi \overline{x}^2$$

B) 
$$\pi \left[ \frac{1}{n} \sum x_1^2 - s^2 \right]$$
 C)  $\frac{\pi}{n} \sum x_i^2$ 

C) 
$$\frac{\pi}{n} \sum x_i^2$$

D) 
$$\pi(\overline{x}^2 - s^2)$$

26. For which of the following set of values will a balanced incomplete block design with parameters v, b, r, k,  $\lambda$  exists:

A) v=11, b=7, r=4, k= 4, 
$$\lambda$$
=2

B) v=21, b=4, r=4, k= 21, 
$$\lambda$$
=4

C) v=7, b=7, r=4, k= 4, 
$$\lambda$$
=2

D) v=11, b=7, r=3, k= 4, 
$$\lambda$$
=4

27. To examine whether two different skin creams, A and B, have different effect on human body, n randomly chosen persons were enrolled in a clinical trial. Then cream A was applied to one of the randomly chosen arms of each person, cream B to the other arm. The design used is:

- A) CRD
- B) LSD
- C) Youden Square
- D) RBD

**28.** A random variable X takes values-3, -2, -1, 0, 1, 2 with probability .1, .2, .2, .1, .3, .1 respectively. Let Y = |X|. Then E(Y) is:

A) .5

- B) 1.3
- C) 1.4
- D) 0

29. Let random variable X denote the number of tosses before the first appearance of a 6 when a balanced die is tossed repeatedly and independently. Then for k= 0,1,2,... the value of P[X= k] is:

- A)  $(1/6)^{k}$
- B) ½
- C)  $(5/6)^k$
- D)  $5^{k}/6^{k+1}$

**30.** If P(B) = 1/3 and  $P(A/B^c) = 1/4$ . The value of P(AUB) is:

- A) 1/2
- B) 2/3
- C) 3/4

D) 5/6

**31.** Let X and Y be iid  $N(0, \sigma^2)$ . Define V = X + Y and S = X - Y. Then the conditional distribution of V given S = s is:

A) Uniform  $\left(\mu - \frac{S}{2}, \mu + \frac{S}{2}\right)$ 

B)  $N(0,2\sigma^2)$ 

C)  $N(0, \sigma^2)$ 

D)  $N(s,\sigma^2)$ 

**32.** Let X be a binomial random variable with parameters n = 11, p = 1/3. The value(s) of k at which P[X = k] maximized is:

- A) k = 1, 2
- B) k = 3, 4
- C) k=5
- D) k=6

**33.** Let X<sub>1</sub>,...,X<sub>n</sub> be a random sample from a distribution with probability density function  $f(x) = \frac{1}{\theta}$ ,  $0 < 0 < x < \theta$ . An unbiased estimator of  $\theta$  is:

A)  $\overline{x}$  (sample mean)

B)  $max(X_1,...,X_n) / (n+1)$ 

	A) $p_A > p_B$	B) $p_A = p_B$	C) $p_A < p_B$	D) $p_A + p_B = 1$
35.	$Y_n = \frac{1}{n} \sum_{i=1}^n X_{2i-1}$ , $Z_n$ is:	$a_n = \frac{1}{n} \sum_{i=1}^n X_{2i}$ . Then the a	asymptotic distributio	non variance $\sigma^2 > 0$ . Let $\sigma$ (as $n \to \infty$ ) of $\sqrt{n}(Y_n - Z_n)$
	A) N(0,1)	$N(0,\sigma^2)$	C) $N(0,2\sigma^2)$ D) D	egenerate at 0
36.	In a CRD the four tr degrees of freedom (		repeated 6,9,11, 8 tii	mes respectively. The error
	A) 3	B) 25	C) 33	D) 30
37.	In an RBD there are f blocks required is:	our treatments A,B,C and	D each is to be repea	ited 5 times. The number of
	A) 5	B) 4	C) 1	D) 3
38.			t $\overline{Y} = \frac{1}{n} \sum Y_i$ . The meth	If the interval $(0,\theta), \ \theta > 1$ . The nod of moments estimator $\frac{1}{-\overline{Y}}$
39.		mple random sample witl s. The probability of gettin B) 15/28		ze 3 from a lot containing 5 cm in the sample is:  D) 15/64
40.	of $\int_{-\infty}^{\infty} e^{-x} f(x) dx$ is	:		itive constant. The value
	A) 0	B) $e^{-c}$	C) ∞	D) 1
41.	Let $X_1,, X_n$ be iid gais:	amma random variables.	Define $Y_i = \frac{X_i}{\sum_{i=1}^n X_i}$ , i=	1,,n. The distribution of $Y_i$
	A) Uniform	B) Beta (first kind)	C) Exponential	D) Pareto

 $D)\frac{n+1}{n}[max(X_1,\ldots,X_n)]$ 

34. Suppose persons A and B draw random samples of sizes 18 and 24 respectively from  $N(\mu, \sigma^2), \sigma > 0$  for testing  $H_0: \mu = 5$  against  $H_1: \mu > 5$  In both the cases the observed sample means and sample standard deviations are same with values  $\overline{x}_1 = \overline{x}_2 = 1.8$ ,  $s_1 = s_2 = s$ . Both

of them use usual t-test and state p-values as  $p_{\text{A}}$  and  $p_{\text{B}}$  respectively. Then

C) min  $(X_1,...,X_n)/n$ 

42.			, $k$ , where $arepsilon_{ij}{\sim}NI(0$		·
	$\sum b_i \overline{Y}_i$ is zero if:		, $a_k$ and $b_1,, b_k$ the		
	A) $\sum a_i b_i = 0$	B) $\sum n_i a_i b_i = 0$	C) $\sum a_i =$	0 D) $\sum \frac{a_i b_i}{n_i}$	= 0
43.	_		ANOVA table of an RE	BD is 63 and do	egrees of freedom for
	the between sum of A) 8	B) 9	C) 10	D)	7
44.	Let random variable is:	X follows uniform	distribution over the i	nterval (0, 2).T	he value of E[X X>.5]
	A) .9375	B) 1.25	C) 1.875	D) 1.5	
45.	The joint distribution	of $X_1$ ,, $X_n$ given	andom variables such $X_1 + X_n$ is:  C) Hyper Geometric		
46.		events such that $I$	$P(A_1 \cup A_2) = P(A_1) +$	$-P(A_2) = 1.T$	hen events $A_1$ and $A_2$
	are:				
	are: A) Independent		B) Mutually	exclusive	
		e and independent		exclusive exclusive and	exhaustive.
47.	<ul><li>A) Independent</li><li>C) Mutually exclusive</li><li>Let x = 10 be an obs</li></ul>	servation on the h		exclusive and m variable X v	with probability mass
47.	<ul><li>A) Independent</li><li>C) Mutually exclusive</li><li>Let x = 10 be an obs</li></ul>	Servation on the h $= \frac{\binom{M}{x} \binom{N-M}{n-x}}{\binom{N}{n}}, x = 0$	D) Mutually yper geometric rando $(M, n)$ and	exclusive and m variable X v n-x <n-m. let<="" th=""><th>with probability mass</th></n-m.>	with probability mass
	A) Independent  C) Mutually exclusive  Let $x = 10$ be an obstitution $P[X = x] = 10$ is an unknown. The real of the real obstitution $P[X = x] = 10$	Servation on the h $= \frac{\binom{M}{x} \binom{N-M}{n-x}}{\binom{N}{n}}, x = 0$ maximum likelihoo B) 75	D) Mutually yper geometric rando $(0,1,,\min(M,n))$ and destimate of N is:	exclusive and m variable X v n-x <n-m. d)<="" let="" th=""><th>with probability mass M = 40, n = 30 and N Not unique</th></n-m.>	with probability mass M = 40, n = 30 and N Not unique
	A) Independent  C) Mutually exclusive  Let $x = 10$ be an obstitution $P[X = x]$ sis an unknown. The real obstitution $X = x + x + x + x + x + x + x + x + x + x$	Servation on the h $= \frac{\binom{M}{x}\binom{N-M}{n-x}}{\binom{N}{n}}, x = 0$ maximum likelihoo B) 75  Rependent and ide on of $Y = \sum X_i^2$ is:	D) Mutually yper geometric rando 0,1,, min (M, n) and d estimate of N is:  C) 60	exclusive and m variable X v n-x <n-m. (<="" bernoulli="" d)="" id)="" let="" th=""><th>with probability mass M = 40, n = 30 and N Not unique</th></n-m.>	with probability mass M = 40, n = 30 and N Not unique

The material of the point $X_1, \dots, X_n$ be incomposed of the point $X_1, \dots, X_n$ be incompos	Servation on the ham $=\frac{\binom{M}{x}\binom{N-M}{n-x}}{\binom{N}{n}}$ , $x=0$ maximum likelihoo B) 75 dependent and ide on of $Y=\sum X_i^2$ is: degrees of freedom $=\sum X_i^2$ . Then	D) Mutually yper geometric rando 0,1,, min (M, n) and d estimate of N is:  C) 60 entically distributed (im  B) N(np, np (	exclusive and m variable X v n-x <n-m. (="" 1-p))<="" bernoulli="" d)="" id)="" let="" th=""><th>with probability mass M = 40, n = 30 and N Not unique</th></n-m.>	with probability mass M = 40, n = 30 and N Not unique

D) P[X > 0] = P[Y > 0]

C)  $P[X > 0] = P\left[Y > \frac{1}{\sqrt{2}}\right]$ 

**50.** The time interval between arrivals of two buses at a bus stop is exponentially distributed with mean 5 minutes. Then the probability that no bus arrives in 5 minutes is:

A) e

B) 1/2

C) 1/5

D) 1/e

## System Biology & Bioinformatics (1068)

- 1. All the molecules listed below are used as spin label probes for studying biomolecules by electron paramagnetic resonance spectroscopy technique, except one;
  - A) 1-piperidinyloxy 2,2,6,6-tetramethyl (TEMPO)
  - B) 5-nitroxyl oxazolidine
  - C) 4-isothiocyanato-TEMPO
  - D) 2,2,6,6-nitroxyl oxazolidine
- **2.** During electrophoretic mobility shift assay specific protein binding to DNA could be identified by which of the following result;
  - A) Appearance of supershifted band upon addition of antibody
  - B) Appearance of fast moving band upon addition of antibody
  - C) Disappearance of all types of bands upon addition of antibody
  - D) Appearance of thick band on bottom of gel upon addition of antibody
- **3.** Following mentioned is the list of tools used for quality assessment of Protein secondary and tertiary structure prediction, except one;
  - A) PROCHECK
- B) VERIFY 3D
- C) WHAT IF
- D) VMD
- **4.** All of the following are examples of transposons, identify which one of the following does not possess reverse transcriptase activity;
  - A) LINEs (long interspersed nuclear elements)
  - B) SINEs (short interspersed nuclear element)
  - C) LTR (Long terminal repeats)
  - D) DNA transposons
- **5.** A gene that will be expressed only if there are two identical copies of it is called as;
  - A) Psuedogene
- B) Syngenic
- C) Recessive gene
- D) Dominant gene
- **6.** A typical BLAST output shows all of the following important properties, except;
  - A) Value of E decreases exponentially with increasing S value.
  - B) The size of database searched can influence the likelihood of particular alignment output
  - C) The size of query can be detrimental to the alignment outputs
  - D) The expected score for alignment of a pair of amino acids cannot be determined
- 7. The Laser beams are used in image analysis, DNA sequencing and so many other techniques. The abbreviation Laser stands for;
  - A) Light amplification by stimulated emission of radiation
  - B) Light amplification by stimulated excitation of radiation
  - C) Light absorption by stimulated emission of radiation
  - D) Light absorption by stimulated excitation of radiation

C) KDEGL seque	ence at N-terminal	D) KDEGL sequ	ence at C-terminal	
<b>27.</b> One of the following	ng mentioned enzymes	is not a serine protease	e enzymes, identify the one;	
A) Trypsin	B) Cocoonase	C) Subtilisin	D) Lysozyme	
-	es emitting β-type of r g isotope has been liste		isted below. Identify which	

<b>29.</b> Hexokinase enzyme catalyzes the first reaction of githis enzyme are Mg <sup>2+</sup> -ATP and;	lycolytic pathway. The substrates for
A) D Change D Mannage and D Emistage	
A) D-Glucose, D-Mannose and D-Fructose	
B) D-Glucose, L-Glucose and D-Fructose	
C) L-Glucose, L-Mannose and L-Fructose	
D) L-Glucose, D-Mannose and D-Fructose	
<b>30.</b> In a protein sequencing reaction by Edman degrad	ation the terminal amino acid reacts
with a chemical to generate its derivative, identify th	
A) First amino acid on N-terminal reacts with pheny	ylthiocyanate
B) First amino acid on C-terminal reacts with pheny	/lthiocyanate
C) First amino acid on N-terminal reacts with pheny	ylisothiocyanate
D) First amino acid on C-terminal reacts with pheny	lisothiocyanate
<b>31.</b> Metabolic flux by glycolysis in muscles is controlled enzyme;	d primarily by which of thefollowing
A) Phosphofructokinase	
B) Glucokinase	
C) Enolase	
D) Glyceraldehyde 3-phosphate dehydrogenase	
2) Olycolandolly at to phosphate dolly alogolast	
32. Lipinski's rule states that a probable drug candida	ate should not violate the following
criteria, except;	
A) It should have molecular mass less than 500 dalto	ons
B) It should not have more than 10 hydrogen bond d	onors
C) It should not have more than 10 hydrogen bond a	cceptors
D) The octanol –water partition coefficient log P sh	-
,	
<b>33.</b> Which of the statements is not true for suicide inhibitor	ors;
A) They are activated by enzyme catalyzed reactions	S
B) They react irreversibly with the enzyme	
C) They form a covalent bond with the enzyme activ	ve site once activated
D) They self destruct as result of enzyme catalysis	
34. An agonist molecule stays bound to a receptor	for a long period, this results in
Phosphorylation of the receptor molecule. This effect	- 1
A) Tolerance of the receptor B) Sen	sitization of the receptor
- ·	truction of the recptor

C) <sup>35</sup>S

 $D)^{125}I$ 

A) <sup>3</sup>H

B) <sup>32</sup>P

**35.** Which of the following statistical approaches is not used for clustering of high throughput techniques generated datas?

A) K-means clustering

B) Self organizing maps

C) Multivariate analysis

- D) Principal component analysis
- **36.** Which of the following statements is not true for effective drug target interactions;
  - A) Desolvation is an energy requiring step to remove water molecules from polar functional groups prior to a drug binding to its active site.
  - B) Water molecules surround a hydrophobic region to generate an ordered layer with reduction in entropy
  - C) Water molecules removal for nonpolar regions of drug and target interaction lead to a lowering the value of  $\Delta$  G
  - D) An increase in entropy at any point of drug target interaction resulting in a higher value of  $\Delta$  G leads to greater chance of drug-target binding
- **37.** You were asked to perform polymerase chain reaction (PCR). The outcome of this experiment showed multiple bands upon electrophoresis inspite of very specific primer sequences used for amplification. What could be the probable reason for such an effect;
  - A) Annealing temperature 3-5 degree less than Tm of primers
  - B) Very high concentration of magnesium ion in the reaction
  - C) Very high annealing temperature
  - D) Low concentration of Magnesium ion used in the reaction
- **38.** In both protein and DNA sequences there may be regions that contain highly repetitive sequences. These regions are known as;

A) High density regions

B) Low density regions

C) High complexity regions

D) Low complexity regions

- **39.** A bioinformatics analytical tool may yield false positive results, which will be the best definition of false positive values;
  - A) A false positive result is when analysis indicated negative but true status is positive
  - B) A false positive result is when analysis indicated positive but true status is negative
  - C) A false positive result is when analysis indicated positive but true status is also positive
  - D) A false positive result is when analysis indicated negative but true status is also negative

inst	afficiently aerobic to	o oxidize all of the N	undergoing high rates of NADH generated, hence of the following activition	
A)	Stop the glycolytic Start alcoholic ferr	cycle	B) Stop generation of D) Start lactic acid for	of NADH selectively
<b>41.</b> Wh	ich of the following	g is not a measure of	central tendency;	
	Percentile Standard deviation	ı	<ul><li>B) Quartile</li><li>D) Mode</li></ul>	
of the		- ·	lation are also effective below, except one, ident C) Pactamycin	
-	parin is a natural a	•	ch binds strongly to b	lood proteins to inhibit
B) C)	Highly sulfated gly	otein molecule lycoprotein molecule ycosyl amino acid mo yosylaminoglycan m	olecule	
	amily tree diagramerited is called as;	1 that shows how a	a particular genetic tra	it or diseases has been
	Phylogenetic tree Cladogram		B) Pedigree D) Dendrogram	
<b>45.</b> In F	language for the i	nput statement >1:	6 the correct output we	ould be;
A)	[1] 1 2 3 4 5 6	B) [1] 1 1 1 1 1 1	C) [6] 1 2 3 4 5 6	D) [6] 1 1 1 1 1 1
	Structure Type -		ypeptide structures are r arnphi and p cout here;	*
A) B) C) D)	3.6 <sub>13</sub> Helix 4.4 <sub>16</sub> Helix	3.6 4.4	49 and 57 ai 119 a	nd +47 nd -70
<b>47.</b> Wh	ich of the following	; is not basic data typ	e in programming in Ca	
A)	Char	B) Long	C) Float	D) Double
<b>48.</b> The	metabolically activ	rated form of glucose	e for glycogen synthesis	is;

A) UDP-glucose			osphate
C) Glucose -6-phos	phate	D) Glucose -1,6-p	bhosphate
<b>49.</b> Out of the six major erroneous, identify w	•	ur have been ment	ioned here, but one data is
A) Isomerases	B) Oxidoreductases	C) Ribozymes	D) Lyases
<b>50.</b> What is the fundamen	ntal unit of execution in	C;	
A) Expression	B) Subexpression	C) Statement	D) Function
	<i>x-x-</i> <sub>\lambda</sub>	<i>:</i>	

## **Zoology** (1068)

1.	In an experiment it was observed that if the developed not an eye but an antenna like str A) Autotomy  C) Morphallaxis	ne eye of shrimp, <i>Palinurus</i> , was removed it ucture. This phenomenon is known as  B) Super regeneration D) Heteromorphosis
2.	Which of the following acts as DNA scisson A) UV light C) Restriction enzymes	B) DNA ligases D) Lasers
3.		cells beneath the wound surface undergo of indistinguishable cells is formed. This is  B) Wound epidermis D) Progress Zone
4.	Cell adhesion molecules that require calcium A) Cadherins C) Gap junctions	n ions for their functioning are B) Immunoglobulin super family D) Laminin
5.	The cortical granule reaction is a mechanism A) Fast block to polyspermy C) Activation of sperm	n involved in B) Slow block to polyspermy D) Activation of egg
6.	An interesting feature of the cleavage patter oblique and give rise to a blastula that  A) Has a normal blastocoel and is called B) Has no blastocoel and is called stere  C) Has a normal blastocoel and is called D) Has no blastocoel and is called more	oblastula. d morula.
7.	Polar lobe is formed during cleavage in  A) Echinoderms and contains a promine B) Molluscs and contains morphogenet C) Amphibians and contains a multilob D) Birds and contains yolk.	ic determinants
8.	The chromatin seen on the nuclear envelope A) Euchromatin called Barr body C) Glycoprotein called Barr body	e of a normal XX female is B) Heterochromatin called Barr body D) Nucleoprotein called Barr body
9.	The organism of choice for studies in develor A) <i>Paleomon</i> C) <i>Caenorhabditis elegans</i>	opmental biology is B) <i>Drosophila</i> D) <i>Rhodinius prolixus</i>

10. P granules in Caenorhabditis elegans are as	sociated with	
A) Founder cells	B) Somatic cells	
C) Germ cells	D) Polar lobe	
11. Which of the following is not associated with	<u> </u>	is
A) Corpus cardiacum	B) Corpus allatum	
C) Corpus striatum	D) Ring gland	
12. A population pyramid with a narrow base an A) Population with more percentage of B) Population with zero growth rate C) Population with more percentage of	individuals of older ag	ge
D) Population with more percentage of	temales	
<b>13.</b> Trisomy of chromosome 21 causes		
A) Cri du chat syndrome	B) Downs syndrome	
C) Marfan syndrome	D) ABCD syndrome	
<i>o,</i>	_ / <b>- </b>	
14. In which phase is heat period experienced by	y mammals exhibiting	g estrous cycle
A) Proestrous B) Metastrous	C) Diestrous	D) Anestrous
<b>15.</b> A piece of nucleic acid used to find a gene b		ith it is called
A) Probe	B) Vector	
C) Restriction sequence	D) Retrovirus	
<b>16.</b> A type of muscle contraction during which contraction. This is called	the muscledoes not s	shorten in length during
A) Isotonic contraction	B) Isometric contract	cion
C) Tetanization	D) Stair case effect	
*	,	
17. Sugars that differ with respect to configuration		
A) Enantiomers B) Epimers	C) Anomers	D) Amphoteric
<b>18.</b> Which of the following is a protein		
A) Cellulose B) Chitin	C) Keratin	D) Inulin
A) Centilose B) Cintili	C) Keraun	D) IIIuiiii
<b>19.</b> The repeat unit of telomere is		
A)TTATTC B) TGATTG	C) TTAGGG	D) TTAGCG
,	,	,
<b>20.</b> What does ping pong mechanism refer to ?		
A) Hydrolysis of carbohydrates in the g		
B) Mechanism of breakdown of fats by		1
C) Enzymatic activity in which enzyme	is temporarily modific	ed
D) Feedback inhibition.		

	ch vitamin causes Xerop B) Vitamin B	hthalmia C) Vitamin C	D) Vitamin D		
22. Which hormone is released into the AC usually in response to acidity					
A) Epinephrin		C) Secretin	D) Insulin		
<b>23.</b> The blood sample of an individual contains agglutinins anti A and anti B in the plasma. His blood group will be					
A) O	B) AB	C) A	D) B		
A) Calcium io: C) Temperatur		B) Venous return D) Metabolism			
<b>25.</b> Which organ is ref A) Liver	erred to as thermostat of B) Hypothalamus	the body C) Thyroid	D) Pineal		
<ul> <li>26. Cyanosis refers to</li> <li>A) Poisoning due to potassium cyanide</li> <li>B) Fumigation of stored products with HCN to kill insect pest</li> <li>C) Bluing of nails and lips</li> <li>D) Colour of blood due to haemocyanin</li> </ul>					
<ul><li>27. The first heart sound appears during which</li><li>A) Isovolumic relaxation</li><li>C) Ejection</li></ul>		of the following phases of the cardiac cycle:  B) Isovolumic contraction D) Rapid ventricular filling			
<b>28.</b> Number of ganglia A) Ten	present in the ventral no B) Eight	erve cord of <i>Musca</i> is C) Five	D) One		
<b>29.</b> The Johnstons orga A) Touch	an in insects is related to B) Taste	which of the following C) Hearing	g senses D) Smell		
<b>30.</b> In the respiratory system of an insect only the last pair of abdominal spiracles are open. This type of respiratory system is called					
A) Apneustic	B) Perineustic	C) Metapneustic	D) Propneustic		
31. Philadelphia chron A) Hepatitis C) Albinism	nosome is found in patie	nts suffering from B) Myelocytic leuka D) Muscular dystrop			
32. In the pupae of some insects the mandibles are powerful, sclerotized and used by the pharate adult to escape from the cocoon. This type of pupa is  A) Decticous  B) Adectious  C) Coarctate  D) Obtectadecticous					
<b>33.</b> Which of the follow A) Quinalopho	wing is not an organo phos B) Phorate	nosphate insecticide C) Malathion	D) Endosulphan		

34.	Which of the following is not a coleopteran pest of stored grains				
	A) Tril	bolium	B) Rhizopertha	C) Corcyra	D) Bruchus
35.	Trypanosoi	<i>ma</i> is vecto	ored by which of the	following	
		tse fly	B) Sand fly	C) Horse fly	D) Flea
36.	Which of the	he followin	ng is not produced by	y honey bees	
	A) Roy	al jelly	B) Wax	C) Venom	D) Pollen
37.	Which of the	he followir	ng characteristics is u	used to identify Cobra:	
	A) Flat			B) Enlarged ventral s	
		supra labia		D) Hexagonal mid-d	orsal vertebral scales
38.				of cellulose in termites	_, _ ,
	A) Gia	rdia	B) Monocystis	C) Trichonympha	D) Balantidium
39.	Which of th	he followir	g lake is originated	by wind action	
			B) Wular lake	•	D) Nainital lake
40.			ch maximum organi ns is known as	isms a habitat can have	under least favourable
	•	tic Potentia		B) Standing crop	
	,	rying Capa		D) Yield	
41.	Eutrophica	tion is caus	sed by addition of	in a water body	
	A) Hea	vy metals	-	B) Detergents	
	C) Fer	tilizers		D) Detergents and fe	rtilizers
42.				the lake with water tem ntervals is known as	perature above 4 <sup>0</sup> C and
	A) Col	d Monomi	ctic	B) Oligomictic	
	C) Pol	ymictic		D) Warm monomicti	c
43.	Labyrinthin	ne organ is	present in which of	the following	
	,	opterus no	1	B) Synbranchus mar	
	C) And	ıbas testud	ineus	D) Monopterus cuch	ia
44.	Compleme				
		ate immun		B) Adaptive immune	eresponse
	C) Hyp	persensitivi	ity	D) CMI	
45.	Farmers lui	ng disease	is		
	A) Typ	el hyperse	ensitivity	B) Type 2 hypersens	itivity
	C) Typ	e 3 hypers	ensitivity	D) Type 4 hypersens	itivity

**46.** Which of the following is passive immunisation

<ul><li>A) Vaccine for snake venom</li><li>C) Tetanus vaccine</li></ul>	<ul><li>B) Polio vaccine</li><li>D) Hepatitis vaccine</li></ul>		
<b>47.</b> Silver carp primarily feeds on			
A) Benthos B) Phytoplankton	C) Small fish	D) Small insects	
<b>48.</b> Homologous genes in different organisms have evolved by direct vertical descent are		ns with same function and	
A) Paralogs B) Orthologs	C) Analogs	D) Homologs	
<b>49.</b> LOD scores are used to predict			
A) Cross over frequencies	B) Gene sequencing		
C) Gene linkage	D) Number of genes in genome		
<b>50.</b> Antibodies in the blood can be detected by	7		
A) TEM B) SEM	C) ELISA	D) RT-PCR	
<i>x-x-</i>	·X
